AWS Managed Policy: Reference Guide

Copyright © 2026 Amazon Web Services, Inc. and/or its affiliates. All rights reserved.

Amazon's trademarks and trade dress may not be used in connection with any product or service that is not Amazon's, in any manner that is likely to cause confusion among customers, or in any manner that disparages or discredits Amazon. All other trademarks not owned by Amazon are the property of their respective owners, who may or may not be affiliated with, connected to, or sponsored by Amazon.

What are AWS managed policies?

An AWS managed policy is a standalone policy that is created and administered by AWS. AWS managed policies are designed to provide permissions for many common use cases. They make it easier for you to get started with assigning permissions to users, groups, and roles than if you had to write the policies yourself.

Keep in mind that AWS managed policies might not grant least-privilege permissions for your specific use cases because they are available for use by all AWS customers. We recommend that you reduce permissions further by defining customer managed policies that are specific to your use cases.

You cannot change the permissions defined in AWS managed policies. If AWS updates the permissions defined in an AWS managed policy, the update affects all principal identities (users, groups, and roles) that the policy is attached to. AWS is most likely to update an AWS managed policy when a new AWS service is launched or new API operations become available for existing services.

For more information, see AWS managed policies in the IAM User Guide.

Understanding policy reference pages

Each policy reference page includes the following information:

- **Using this policy** – Whether you can attach the policy to users, groups, and roles
- **Policy details**
  - **Type** – The type of AWS managed policy
    - `AWS managed policy` – A standard AWS managed policy
    - `Job function policy` – Policy that aligns with common industry job functions
    - `Service-linked role policy` – Policy that is attached to a service-linked role that allows a service to perform actions on your behalf, such as the section called "AmazonRDSPreviewServiceRolePolicy"
    - `Service role policy` – Policy designed to work with service roles, such as the section called "AWSControlTowerServiceRolePolicy"
  - **Creation time** – When the policy was first created
  - **Edited time** – When this version of the policy was edited

  - **ARN** – The Amazon Resource Name of the policy
- **Policy version** – The version of the permissions granted by the policy
- **JSON policy document** – The policy JSON
- **Learn more** – Links to documentation related to AWS managed policies

Deprecated AWS managed policies

AWS regularly updates AWS managed policies. In most cases, we add permissions to a policy. This happens when we launch a new service or feature. To improve the security of AWS managed policies, we sometimes reduce the scope of policies. When we remove permissions from a policy, we set the policy to a *deprecated* state and make a new one available. When AWS deprecates a service or feature, we also deprecate the AWS managed policy for that feature.

If you receive an email notification that a policy you are using is deprecated, we recommend that you immediately take action. Identify the change to the policy and update your workflows. If AWS provides a replacement policy, plan to attach it to all affected identities (users, groups, and roles) and then detach the deprecated policy from those identities.

A deprecated policy has the following characteristics:

- It is removed from this guide.
- Permissions continue to work for all *currently* attached identities.
- In accounts where the policy is attached to an identity, it appears in the **Policies** list in the IAM console with a warning icon next to it.
- It *cannot* be attached to any new identities. If you detach it from a current identity, you cannot reattach it.
- After you detach it from all current entities, it is no longer visible.

AccessAnalyzerServiceRolePolicy

Description: Allow Access Analyzer to analyze resource metadata

`AccessAnalyzerServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: December 02, 2019, 17:13 UTC
- **Edited time:** February 12, 2026, 17:59 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AccessAnalyzerServiceRolePolicy`

Policy version

Policy version: v23 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

AccountManagementFromVercel

Description: For use with accounts created through the Vercel Marketplace integration with AWS. Provides access to account management, notification, cost and usage analysis, and identity provider management.

`AccountManagementFromVercel` is an AWS managed policy.

Using this policy

You can attach `AccountManagementFromVercel` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: December 11, 2025, 16:34 UTC
- **Edited time:** February 12, 2026, 18:00 UTC
- **ARN**: `arn:aws:iam::aws:policy/AccountManagementFromVercel`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",

AdministratorAccess

Description: Provides full access to AWS services and resources.

`AdministratorAccess` is an AWS managed policy.

Using this policy

You can attach `AdministratorAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: February 06, 2015, 18:39 UTC
- **Edited time:** February 06, 2015, 18:39 UTC
- **ARN**: `arn:aws:iam::aws:policy/AdministratorAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : "*",
      "Resource" : "*"
    }
  ]
}
```

AdministratorAccess-Amplify

Description: Grants account administrative permissions while explicitly allowing direct access to resources needed by Amplify applications.

`AdministratorAccess-Amplify` is an AWS managed policy.

Using this policy

You can attach `AdministratorAccess-Amplify` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: December 01, 2020, 19:03 UTC
- **Edited time:** April 04, 2024, 20:35 UTC
- **ARN**: `arn:aws:iam::aws:policy/AdministratorAccess-Amplify`

Policy version

Policy version: v12 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AdministratorAccess-AWSElasticBeanstalk

Description: Grants account administrative permissions. Explicitly allows developers and administrators to gain direct access to resources they need to manage AWS Elastic Beanstalk applications

`AdministratorAccess-AWSElasticBeanstalk` is an AWS managed policy.

Using this policy

You can attach `AdministratorAccess-AWSElasticBeanstalk` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: January 22, 2021, 19:36 UTC
- **Edited time:** February 12, 2026, 18:00 UTC
- **ARN**: `arn:aws:iam::aws:policy/AdministratorAccess-AWSElasticBeanstalk`

Policy version

Policy version: v9 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AIDevOpsAgentAccessPolicy

Description: Provides permissions required by the AWS DevOps Agent to conduct investigations and perform analysis on customer AWS resources.

`AIDevOpsAgentAccessPolicy` is an AWS managed policy.

Using this policy

You can attach `AIDevOpsAgentAccessPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: March 26, 2026, 03:42 UTC
- **Edited time:** March 26, 2026, 03:42 UTC
- **ARN**: `arn:aws:iam::aws:policy/AIDevOpsAgentAccessPolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AIDevOpsAgentFullAccess

Description: Provides full access to Amazon DevOps Agent via the AWS Management Console

`AIDevOpsAgentFullAccess` is an AWS managed policy.

Using this policy

You can attach `AIDevOpsAgentFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: March 26, 2026, 03:42 UTC
- **Edited time:** March 26, 2026, 03:42 UTC
- **ARN**: `arn:aws:iam::aws:policy/AIDevOpsAgentFullAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AIDevOpsAgentReadOnlyAccess

Description: Provides read only access to Amazon DevOps Agent via the AWS Management Console

`AIDevOpsAgentReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `AIDevOpsAgentReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: March 26, 2026, 03:42 UTC
- **Edited time:** March 26, 2026, 03:42 UTC
- **ARN**: `arn:aws:iam::aws:policy/AIDevOpsAgentReadOnlyAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "AIDevOpsAgentReadOnlyAccess",
      "Effect" : "Allow",
      "Action" : [
        "aidevops:Get*",
        "aidevops:List*",
        "aidevops:SearchServiceAccessibleResource"
      ],
      "Resource" : "*"
    }
  ]
}
```

AIDevOpsOperatorAppAccessPolicy

Description: Provides access to use the AWS DevOps operator web app for an Agent Space.

`AIDevOpsOperatorAppAccessPolicy` is an AWS managed policy.

Using this policy

You can attach `AIDevOpsOperatorAppAccessPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: March 26, 2026, 03:42 UTC
- **Edited time:** March 29, 2026, 03:57 UTC
- **ARN**: `arn:aws:iam::aws:policy/AIDevOpsOperatorAppAccessPolicy`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```

AIOpsAssistantIncidentReportPolicy

Description: Provides permissions required by the Amazon AI Operations Assistant to generate incident report of the investigation.

`AIOpsAssistantIncidentReportPolicy` is an AWS managed policy.

Using this policy

You can attach `AIOpsAssistantIncidentReportPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: October 10, 2025, 22:04 UTC
- **Edited time:** February 12, 2026, 18:00 UTC
- **ARN**: `arn:aws:iam::aws:policy/AIOpsAssistantIncidentReportPolicy`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AIOpsAssistantPolicy

Description: Provides ReadOnly permissions required by the Amazon AI Operations Assistant to do analysis on customer AWS resources during investigations.

`AIOpsAssistantPolicy` is an AWS managed policy.

Using this policy

You can attach `AIOpsAssistantPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: December 02, 2024, 16:21 UTC
- **Edited time:** February 12, 2026, 17:57 UTC
- **ARN**: `arn:aws:iam::aws:policy/AIOpsAssistantPolicy`

Policy version

Policy version: v15 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

AIOpsConsoleAdminPolicy

Description: Grants full access to Amazon AI Operations service and its required permissions via AWS console. It also includes permissions to use identity-aware console sessions.

`AIOpsConsoleAdminPolicy` is an AWS managed policy.

Using this policy

You can attach `AIOpsConsoleAdminPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: December 02, 2024, 23:51 UTC
- **Edited time:** February 12, 2026, 17:58 UTC
- **ARN**: `arn:aws:iam::aws:policy/AIOpsConsoleAdminPolicy`

Policy version

Policy version: v9 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```

AIOpsReadOnlyAccess

Description: Grants ReadOnly permissions to the Amazon AI Operations service and its required resources.

`AIOpsReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `AIOpsReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: December 02, 2024, 23:51 UTC
- **Edited time:** February 12, 2026, 17:57 UTC
- **ARN**: `arn:aws:iam::aws:policy/AIOpsReadOnlyAccess`

Policy version

Policy version: v6 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "AIOpsReadOnlyAccess",
      "Effect" : "Allow",
      "Action" : [
        "aiops:Get*",
        "aiops:List*",
        "aiops:ValidateInvestigationGroup"
      ],
      "Resource" : "*"
    },
    {
      "Sid" : "SSOManagementAccess",
      "Effect" : "Allow",
      "Action" : [

AlexaForBusinessNetworkProfileServicePolicy

Description: This policy enables Alexa for Business to perform automated tasks scheduled by your network profiles.

`AlexaForBusinessNetworkProfileServicePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: March 13, 2019, 00:53 UTC
- **Edited time:** April 05, 2019, 21:57 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AlexaForBusinessNetworkProfileServicePolicy`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [

AmazonAPIGatewayPushToCloudWatchLogs

Description: Allows API Gateway to push logs to user's account.

`AmazonAPIGatewayPushToCloudWatchLogs` is an AWS managed policy.

Using this policy

You can attach `AmazonAPIGatewayPushToCloudWatchLogs` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: November 11, 2015, 23:41 UTC
- **Edited time:** November 11, 2015, 23:41 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonAPIGatewayPushToCloudWatchLogs`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "logs:CreateLogGroup",
        "logs:CreateLogStream",
        "logs:DescribeLogGroups",
        "logs:DescribeLogStreams",
        "logs:PutLogEvents",
        "logs:GetLogEvents",
        "logs:FilterLogEvents"
      ],
      "Resource" : "*"
    }
  ]
}
```

AmazonAppFlowFullAccess

Description: Provides full access to Amazon AppFlow and access to AWS services supported as flow source or destination (S3 and Redshift). Also provides access to KMS for encryption

`AmazonAppFlowFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonAppFlowFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: June 02, 2020, 23:30 UTC
- **Edited time:** February 28, 2022, 23:11 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonAppFlowFullAccess`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{

AmazonAthenaServiceRolePolicy

Description: Allows access to other AWS service resources that are required to run Amazon Athena

`AmazonAthenaServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: November 14, 2025, 22:34 UTC
- **Edited time:** November 14, 2025, 22:34 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonAthenaServiceRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "CloudWatchPolicyStatement",
      "Effect" : "Allow",
      "Action" : [
        "cloudwatch:PutMetricData"
      ],
      "Resource" : "*",
      "Condition" : {
        "StringEquals" : {
          "cloudwatch:namespace" : [
            "AWS/Athena",
            "AWS/Usage"
          ]
        }
      }
    }
  ]
}
```

AmazonAugmentedAIFullAccess

Description: Provides access to perform all operations Amazon Augmented AI resources, including FlowDefinitions, HumanTaskUis and HumanLoops. Does not allow access for creating FlowDefinitions against the public-crowd Workteam.

`AmazonAugmentedAIFullAccess` is an AWS managed policy.

Using this policy

You can attach AmazonAugmentedAIFullAccess to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: December 03, 2019, 16:21 UTC
- **Edited time:** December 03, 2019, 16:21 UTC
- **ARN**: arn:aws:iam::aws:policy/AmazonAugmentedAIFullAccess

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AmazonBedrockLimitedAccess

Description: Provides limited access to Amazon Bedrock as well as to related services that are required by it

`AmazonBedrockLimitedAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonBedrockLimitedAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: June 29, 2025, 22:22 UTC
- **Edited time:** April 09, 2026, 04:42 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonBedrockLimitedAccess`

Policy version

Policy version: v8 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonBedrockReadOnly

Description: Provides read only access to Amazon Bedrock

`AmazonBedrockReadOnly` is an AWS managed policy.

Using this policy

You can attach `AmazonBedrockReadOnly` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: December 06, 2023, 15:48 UTC
- **Edited time:** February 12, 2026, 17:57 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonBedrockReadOnly`

Policy version

Policy version: v7 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AmazonBraketServiceRolePolicy

Description: Allows Amazon Braket to create and manage AWS resources on your behalf

`AmazonBraketServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: August 04, 2020, 17:12 UTC
- **Edited time:** July 11, 2025, 21:37 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonBraketServiceRolePolicy`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "s3:PutObject",
        "s3:GetObject",
        "s3:ListBucket"
      ],
      "Resource" : "arn:aws:s3:::amazon-braket-*",
      "Condition" : {
        "StringEquals" : {
          "aws:ResourceAccount" : "${aws:PrincipalAccount}"
        }
      }
    },
    {
      "Effect" : "Allow",
      "Action" : [
        "logs:PutLogEvents",
        "logs:CreateLogStream",
        "logs:DescribeLogStreams",
        "logs:CreateLogGroup",
        "logs:DescribeLogGroups"
      ],
      "Resource" : "arn:aws:logs:*:*:log-group:/aws/braket:*",
      "Condition" : {
        "StringEquals" : {
          "aws:ResourceAccount" : "${aws:PrincipalAccount}"
        }
      }
    }
  ]
}
```

AmazonChimeReadOnly

Description: Provides read only access to Amazon Chime Admin Console via the AWS Management Console.

`AmazonChimeReadOnly` is an AWS managed policy.

Using this policy

You can attach `AmazonChimeReadOnly` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: November 01, 2017, 22:04 UTC
- **Edited time:** December 14, 2020, 20:53 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonChimeReadOnly`

Policy version

Policy version: v10 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Action" : [
        "chime:List*",
```

```
        "chime:Get*",
        "chime:Describe*",
        "chime:SearchAvailablePhoneNumbers"
      ],
      "Effect" : "Allow",
      "Resource" : "*"
    }
  ]
}
```

AmazonChimeVoiceConnectorServiceLinkedRolePolicy

Description: Managed policy for Service Linked Role for Amazon Chime VoiceConnector

`AmazonChimeVoiceConnectorServiceLinkedRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: September 30, 2019, 22:16 UTC
- **Edited time:** April 14, 2023, 21:49 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonChimeVoiceConnectorServiceLinkedRolePolicy`

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "chime:GetVoiceConnector*"
      ],
      "Resource" : [
        "*"
      ]
    },
    {
      "Effect" : "Allow",
      "Action" : [
```

```

AmazonCloudDirectoryFullAccess

Description: Provides full access to Amazon Cloud Directory Service.

`AmazonCloudDirectoryFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonCloudDirectoryFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: February 25, 2017, 00:41 UTC
- **Edited time:** February 25, 2017, 00:41 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonCloudDirectoryFullAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "clouddirectory:*"
      ],
      "Resource" : [
        "*"
      ]
    }
  ]
}
```

AmazonCognitoDeveloperAuthenticatedIdentities

Description: Provides access to Amazon Cognito APIs to support developer authenticated identities from your authentication backend.

`AmazonCognitoDeveloperAuthenticatedIdentities` is an AWS managed policy.

Using this policy

You can attach `AmazonCognitoDeveloperAuthenticatedIdentities` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: March 24, 2015, 17:22 UTC
- **Edited time:** March 24, 2015, 17:22 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonCognitoDeveloperAuthenticatedIdentities`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "cognito-identity:GetOpenIdTokenForDeveloperIdentity",
        "cognito-identity:LookupDeveloperIdentity",
        "cognito-identity:MergeDeveloperIdentities",
        "cognito-identity:UnlinkDeveloperIdentity"
      ],
      "Resource" : "*"
    }
  ]
}
```

AmazonCognitoUnAuthedIdentitiesSessionPolicy

Description: This policy defines the set of permissions allowed for unauthenticated identities for Cognito Identity Pools. This policy is not intended to be used as a stand alone permission policy. It is used as a guardrail against overly permissive policies attached for roles in an identity pool. Do not attach this policy to any roles, as Cognito Identity Service will automatically include it as a scoped down policy when creating credentials. The privileges to temporarily access other AWS resources through the enhanced flow will now be defined by the intersection of the role associated with the identity of the unauthenticated user provided by a service, and the privileges given in this managed policy that is owned by Cognito.

`AmazonCognitoUnAuthedIdentitiesSessionPolicy` is an AWS managed policy.

Using this policy

You can attach `AmazonCognitoUnAuthedIdentitiesSessionPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: July 19, 2023, 23:04 UTC
- **Edited time:** November 01, 2024, 18:12 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonCognitoUnAuthedIdentitiesSessionPolicy`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "CognitoUnAuthedIdentitiesSessionPolicy",

AmazonConnectServiceLinkedRolePolicy

Description: Allows Amazon Connect to create and manage AWS resources on your behalf.

`AmazonConnectServiceLinkedRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: September 07, 2018, 00:21 UTC
- **Edited time:** February 12, 2026, 17:59 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonConnectServiceLinkedRolePolicy`

Policy version

Policy version: v53 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonConnectSynchronizationServiceRolePolicy

Description: Allows Amazon Connect to synchronize AWS resources across regions on your behalf.

`AmazonConnectSynchronizationServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy

- **Creation time**: October 27, 2023, 22:38 UTC
- **Edited time:** November 21, 2025, 20:19 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonConnectSynchronizationServiceRolePolicy`

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonConnectVoiceIDFullAccess

Description: Provides full access to Amazon Connect Voice ID

`AmazonConnectVoiceIDFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonConnectVoiceIDFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: September 26, 2021, 19:04 UTC
- **Edited time:** September 26, 2021, 19:04 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonConnectVoiceIDFullAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : "voiceid:*",
      "Resource" : "*"
    }
  ]
}
```

AmazonDataZoneBedrockModelConsumptionPolicy

Description: Provides permissions to consume Amazon Bedrock models, including invoking Amazon Bedrock application inference profile created for particular Amazon DataZone domain.

`AmazonDataZoneBedrockModelConsumptionPolicy` is an AWS managed policy.

Using this policy

You can attach `AmazonDataZoneBedrockModelConsumptionPolicy` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: November 12, 2024, 22:15 UTC
- **Edited time:** February 12, 2026, 18:01 UTC

- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonDataZoneBedrockModelConsumptionPolicy`

Policy version

Policy version: v7 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```

AmazonDataZoneEnvironmentRolePermissionsBoundary

Description: Amazon DataZone creates IAM roles for Environments to perform data analytics actions, and uses this policy when creating these roles to define the boundary of their permissions.

`AmazonDataZoneEnvironmentRolePermissionsBoundary` is an AWS managed policy.

Using this policy

You can attach `AmazonDataZoneEnvironmentRolePermissionsBoundary` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: September 11, 2023, 23:38 UTC
- **Edited time:** November 17, 2023, 23:29 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonDataZoneEnvironmentRolePermissionsBoundary`

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

AmazonDataZoneFullAccess

Description: Provides full access to Amazon DataZone via the AWS Management Console as well as limited access to related services that are required by it.

`AmazonDataZoneFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonDataZoneFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: September 22, 2023, 20:06 UTC
- **Edited time:** February 12, 2026, 17:59 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonDataZoneFullAccess`

Policy version

Policy version: v13 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonDataZoneFullUserAccess

Description: Provides full access to Amazon DataZone, but does not allow the management of domains, users, or associated accounts.

`AmazonDataZoneFullUserAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonDataZoneFullUserAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: September 22, 2023, 21:06 UTC
- **Edited time:** November 19, 2024, 21:38 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonDataZoneFullUserAccess`

Policy version

Policy version: v9 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonDataZoneGlueManageAccessRolePolicy

Description: The policy grants permissions to allow Amazon DataZone to enable publishing and access grants to data.

`AmazonDataZoneGlueManageAccessRolePolicy` is an AWS managed policy.

Using this policy

You can attach `AmazonDataZoneGlueManageAccessRolePolicy` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: September 22, 2023, 20:21 UTC
- **Edited time:** February 12, 2026, 18:00 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonDataZoneGlueManageAccessRolePolicy`

Policy version

Policy version: v18 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonDataZonePortalFullAccessPolicy

Description: Provides full access to Amazon DataZone APIs

`AmazonDataZonePortalFullAccessPolicy` is an AWS managed policy.

Using this policy

You can attach `AmazonDataZonePortalFullAccessPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: March 26, 2023, 18:24 UTC
- **Edited time:** March 26, 2023, 18:24 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonDataZonePortalFullAccessPolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : "datazonecontrol:*",
      "Resource" : "*"
    }
  ]
}
```

AmazonDataZonePreviewConsoleFullAccess

Description: Provides full access to the Preview release of Amazon DataZone via the AWS Management Console. Also provides select access to other related services.

`AmazonDataZonePreviewConsoleFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonDataZonePreviewConsoleFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: March 28, 2023, 15:16 UTC
- **Edited time:** July 13, 2023, 18:01 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonDataZonePreviewConsoleFullAccess`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonDataZoneProjectDeploymentPermissionsBoundary

Description: Amazon DataZone creates IAM roles that it uses for deploying data analytics projects. DataZone uses this policy when creating these roles to define the boundary of their permissions.

`AmazonDataZoneProjectDeploymentPermissionsBoundary` is an AWS managed policy.

Using this policy

You can attach `AmazonDataZoneProjectDeploymentPermissionsBoundary` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: March 21, 2023, 02:54 UTC
- **Edited time:** April 04, 2023, 02:48 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonDataZoneProjectDeploymentPermissionsBoundary`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonDataZoneProjectRolePermissionsBoundary

Description: Amazon DataZone creates IAM roles for projects to perform data analytics actions, and uses this policy when creating these roles to define the boundary of their permissions.

`AmazonDataZoneProjectRolePermissionsBoundary` is an AWS managed policy.

Using this policy

You can attach `AmazonDataZoneProjectRolePermissionsBoundary` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: March 21, 2023, 02:51 UTC
- **Edited time:** March 21, 2023, 02:51 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonDataZoneProjectRolePermissionsBoundary`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonDataZoneRedshiftGlueProvisioningPolicy

Description: Amazon DataZone is a data management service that enables you to catalog, discover, govern, share, and analyze your data. With Amazon DataZone, you can share and access your data across accounts and supported regions. Amazon DataZone simplifies your experience across AWS services, including, but not limited to, Amazon Redshift, Amazon Athena, AWS Glue, and AWS Lake Formation.

`AmazonDataZoneRedshiftGlueProvisioningPolicy` is an AWS managed policy.

Using this policy

You can attach `AmazonDataZoneRedshiftGlueProvisioningPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: September 22, 2023, 20:19 UTC
- **Edited time:** October 23, 2024, 18:29 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonDataZoneRedshiftGlueProvisioningPolicy`

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonDataZoneRedshiftManageAccessRolePolicy

Description: This policy gives Amazon DataZone permissions to publish Amazon Redshift data to the catalog. It also gives Amazon DataZone permissions to grant access or revoke access to Amazon Redshift or Amazon Redshift Serverless published assets in the catalog.

`AmazonDataZoneRedshiftManageAccessRolePolicy` is an AWS managed policy.

Using this policy

You can attach `AmazonDataZoneRedshiftManageAccessRolePolicy` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: September 22, 2023, 20:15 UTC
- **Edited time:** February 12, 2026, 18:01 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonDataZoneRedshiftManageAccessRolePolicy`

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonDataZoneSageMakerEnvironmentRolePermissionsBoundary

Description: The AmazonDataZoneSageMakerEnvironmentRolePermissionsBoundary policy is the list of permissions that are permitted on an execution role created in a SageMaker environment provisioned by Amazon DataZone.

`AmazonDataZoneSageMakerEnvironmentRolePermissionsBoundary` is an AWS managed policy.

Using this policy

You can attach `AmazonDataZoneSageMakerEnvironmentRolePermissionsBoundary` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: April 23, 2024, 23:01 UTC
- **Edited time:** March 11, 2026, 21:12 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonDataZoneSageMakerEnvironmentRolePermissionsBoundary`

Policy version

Policy version: v11 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonDataZoneSageMakerManageAccessRolePolicy

Description: The AmazonDataZoneSageMakerManageAccessRolePolicy policy grants Amazon DataZone the permissions required to grant user access to various resources in the SageMaker environment.

`AmazonDataZoneSageMakerManageAccessRolePolicy` is an AWS managed policy.

Using this policy

You can attach `AmazonDataZoneSageMakerManageAccessRolePolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: April 23, 2024, 23:34 UTC
- **Edited time:** February 12, 2026, 18:03 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonDataZoneSageMakerManageAccessRolePolicy`

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonDetectiveFullAccess

Description: Provides full access to Amazon Detective service and scoped access to the console UI dependencies

`AmazonDetectiveFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonDetectiveFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: April 30, 2020, 17:57 UTC
- **Edited time:** May 17, 2023, 19:39 UTC

- **ARN**: `arn:aws:iam::aws:policy/AmazonDetectiveFullAccess`

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "detective:*",

AmazonDetectiveServiceLinkedRolePolicy

Description: Allows Amazon Detective to make service calls on your behalf

`AmazonDetectiveServiceLinkedRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: November 18, 2021, 19:47 UTC
- **Edited time:** November 18, 2021, 19:47 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonDetectiveServiceLinkedRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "organizations:DescribeAccount",
        "organizations:ListAccounts"
      ],
      "Resource" : "*"
    }
  ]
}
```

AmazonDevOpsGuruOrganizationsAccess

Description: Provide access to enable and manage Amazon DevOps Guru within an organization.

`AmazonDevOpsGuruOrganizationsAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonDevOpsGuruOrganizationsAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: November 15, 2021, 23:50 UTC
- **Edited time:** November 15, 2021, 23:50 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonDevOpsGuruOrganizationsAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AmazonDevOpsGuruServiceRolePolicy

Description: A service-linked role required for Amazon DevOpsGuru to access your resources.

`AmazonDevOpsGuruServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: December 01, 2020, 10:24 UTC
- **Edited time:** January 10, 2023, 14:36 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonDevOpsGuruServiceRolePolicy`

Policy version

Policy version: v9 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```

AmazonDocDB-ElasticServiceRolePolicy

Description: Allows Amazon DocumentDB-Elastic to manage AWS resources on your behalf.

`AmazonDocDB-ElasticServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: November 30, 2022, 14:17 UTC
- **Edited time:** November 30, 2022, 14:17 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonDocDB-ElasticServiceRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "cloudwatch:PutMetricData"
      ],
      "Resource" : "*",
      "Condition" : {
        "StringEquals" : {
          "cloudwatch:namespace" : [
            "AWS/DocDB-Elastic"
          ]
        }
      }
    }
  ]
}
```

AmazonDocDBConsoleFullAccess

Description: Provides full access to manage Amazon DocumentDB with MongoDB compatibility using the AWS Management Console. Note this policy also grants full access to publish on all SNS topics within the account, permissions to create and edit Amazon EC2 instances and VPC

configurations, permissions to view and list keys on Amazon KMS, and full access to Amazon RDS and Amazon Neptune.

`AmazonDocDBConsoleFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonDocDBConsoleFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: January 09, 2019, 20:37 UTC
- **Edited time:** February 12, 2026, 17:59 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonDocDBConsoleFullAccess`

Policy version

Policy version: v10 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonDocDBElasticFullAccess

Description: Provides full access to Amazon DocumentDB Elastic Clusters and other required permissions for its dependencies including EC2, KMS, SecretsManager, CloudWatch and IAM.

`AmazonDocDBElasticFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonDocDBElasticFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: June 05, 2023, 13:51 UTC
- **Edited time:** February 12, 2026, 17:58 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonDocDBElasticFullAccess`

Policy version

Policy version: v8 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonDocDBReadOnlyAccess

Description: Provides read-only access to Amazon DocumentDB with MongoDB compatibility. Note that this policy also grants access to Amazon RDS and Amazon Neptune resources.

`AmazonDocDBReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonDocDBReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: January 09, 2019, 20:30 UTC
- **Edited time:** January 09, 2019, 20:30 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonDocDBReadOnlyAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonDynamoDBFullAccess_v2

Description: Provides full access to Amazon DynamoDB

`AmazonDynamoDBFullAccess_v2` is an AWS managed policy.

Using this policy

You can attach `AmazonDynamoDBFullAccess_v2` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: May 22, 2025, 14:52 UTC
- **Edited time:** February 12, 2026, 18:02 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonDynamoDBFullAccess_v2`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonEBSCSIDriverPolicy

Description: IAM Policy that allows the CSI driver service account to make calls to related services such as EC2 on your behalf.

`AmazonEBSCSIDriverPolicy` is an AWS managed policy.

Using this policy

You can attach `AmazonEBSCSIDriverPolicy` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: April 04, 2022, 17:24 UTC
- **Edited time:** February 12, 2026, 18:02 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonEBSCSIDriverPolicy`

Policy version

Policy version: v14 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AmazonEC2ContainerServiceRole

Description: Default policy for Amazon ECS service role.

`AmazonEC2ContainerServiceRole` is an AWS managed policy.

Using this policy

You can attach `AmazonEC2ContainerServiceRole` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: April 09, 2015, 16:14 UTC
- **Edited time:** August 11, 2016, 13:08 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonEC2ContainerServiceRole`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "ec2:AuthorizeSecurityGroupIngress",
        "ec2:Describe*",
        "elasticloadbalancing:DeregisterInstancesFromLoadBalancer",
        "elasticloadbalancing:DeregisterTargets",
        "elasticloadbalancing:Describe*",
        "elasticloadbalancing:RegisterInstancesWithLoadBalancer",
        "elasticloadbalancing:RegisterTargets"
      ],
      "Resource" : "*"
    }
  ]
}
```

AmazonEC2SpotFleetAutoscaleRole

Description: Policy to enable Autoscaling for Amazon EC2 Spot Fleet

`AmazonEC2SpotFleetAutoscaleRole` is an AWS managed policy.

Using this policy

You can attach `AmazonEC2SpotFleetAutoscaleRole` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: August 19, 2016, 18:27 UTC
- **Edited time:** February 18, 2019, 19:17 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonEC2SpotFleetAutoscaleRole`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "ec2:DescribeSpotFleetRequests",
        "ec2:ModifySpotFleetRequest"
      ],
      "Resource" : [
        "*"
      ]
    },
    {
      "Effect" : "Allow",
      "Action" : [
        "cloudwatch:DescribeAlarms",
        "cloudwatch:PutMetricAlarm",
        "cloudwatch:DeleteAlarms"
      ],
      "Resource" : [
        "*"
      ]
```

```
    },
    {
      "Action" : "iam:CreateServiceLinkedRole",
      "Effect" : "Allow",
      "Resource" : "arn:aws:iam::*:role/aws-service-role/ec2.application-
autoscaling.amazonaws.com/AWSServiceRoleForApplicationAutoScaling_EC2SpotFleetRequest",
      "Condition" : {
        "StringLike" : {
          "iam:AWSServiceName" : "ec2.application-autoscaling.amazonaws.com"
        }
      }
    }
  ]
}
```

AmazonEC2SpotFleetTaggingRole

Description: Allows EC2 Spot Fleet to request, terminate and tag Spot Instances on your behalf.

`AmazonEC2SpotFleetTaggingRole` is an AWS managed policy.

Using this policy

You can attach `AmazonEC2SpotFleetTaggingRole` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: June 29, 2017, 18:19 UTC
- **Edited time:** April 23, 2020, 19:30 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonEC2SpotFleetTaggingRole`

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AmazonECS_FullAccess

Description: Provides administrative access to Amazon ECS resources and enables ECS features through access to other AWS service resources, including VPCs, Auto Scaling groups, and CloudFormation stacks.

`AmazonECS_FullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonECS_FullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: November 07, 2017, 21:36 UTC
- **Edited time:** August 13, 2024, 19:39 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonECS_FullAccess`

Policy version

Policy version: v21 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonECSComputeServiceRolePolicy

Description: Policy to enable Amazon ECS Compute to manage your EC2 instances and related resources as part of ECS managed instances

`AmazonECSComputeServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: March 24, 2025, 17:37 UTC
- **Edited time:** February 12, 2026, 17:57 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonECSComputeServiceRolePolicy`

Policy version

Policy version: v6 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [

AmazonECSInfrastructureRolePolicyForLoadBalancers

Description: Provides access to other AWS service resources required to manage load balancers associated with ECS workloads on your behalf.

`AmazonECSInfrastructureRolePolicyForLoadBalancers` is an AWS managed policy.

Using this policy

You can attach `AmazonECSInfrastructureRolePolicyForLoadBalancers` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: July 17, 2025, 16:37 UTC
- **Edited time:** February 12, 2026, 18:01 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonECSInfrastructureRolePolicyForLoadBalancers`

Policy version

Policy version: v6 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

AmazonECSInfrastructureRolePolicyForManagedInstances

Description: Provides ECS access to create and manage EC2 managed resources

`AmazonECSInfrastructureRolePolicyForManagedInstances` is an AWS managed policy.

Using this policy

You can attach `AmazonECSInfrastructureRolePolicyForManagedInstances` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: September 26, 2025, 18:04 UTC
- **Edited time:** February 26, 2026, 18:27 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonECSInfrastructureRolePolicyForManagedInstances`

Policy version

Policy version: v11 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonECSInfrastructureRolePolicyForServiceConnectTransportLay

Description: Provides administrative access to Private Certificate Authority, AWS Secrets Manager and other AWS services required to manage ECS Service Connect TLS features on your behalf.

`AmazonECSInfrastructureRolePolicyForServiceConnectTransportLayerSecurity` is an AWS managed policy.

Using this policy

You can attach `AmazonECSInfrastructureRolePolicyForServiceConnectTransportLayerSecurity` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: January 19, 2024, 20:08 UTC
- **Edited time:** February 12, 2026, 18:02 UTC

- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonECSInfrastructureRolePolicyForServiceConnectTransportLayerSecurity`

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonECSInfrastructureRolePolicyForVolumes

Description: Provides access to other AWS service resources required to manage volumes associated with ECS workloads on your behalf.

`AmazonECSInfrastructureRolePolicyForVolumes` is an AWS managed policy.

Using this policy

You can attach `AmazonECSInfrastructureRolePolicyForVolumes` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: January 10, 2024, 22:56 UTC
- **Edited time:** February 12, 2026, 18:02 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonECSInfrastructureRolePolicyForVolumes`

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```

AmazonECSServiceRolePolicy

Description: Policy to enable Amazon ECS to manage your cluster.

`AmazonECSServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: October 14, 2017, 01:18 UTC
- **Edited time:** February 12, 2026, 17:58 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonECSServiceRolePolicy`

Policy version

Policy version: v23 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonECSTaskExecutionRolePolicy

Description: Provides access to other AWS service resources that are required to run Amazon ECS tasks

`AmazonECSTaskExecutionRolePolicy` is an AWS managed policy.

Using this policy

You can attach `AmazonECSTaskExecutionRolePolicy` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: November 16, 2017, 18:48 UTC
- **Edited time:** November 16, 2017, 18:48 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonECSTaskExecutionRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonEFSCSIDriverPolicy

Description: Provides management access to EFS resources and read access to EC2

`AmazonEFSCSIDriverPolicy` is an AWS managed policy.

Using this policy

You can attach `AmazonEFSCSIDriverPolicy` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: July 25, 2023, 20:10 UTC
- **Edited time:** July 25, 2023, 20:10 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonEFSCSIDriverPolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

AmazonEKS_CNI_Policy

Description: This policy provides the Amazon VPC CNI Plugin (amazon-vpc-cni-k8s) the permissions it requires to modify the IP address configuration on your EKS worker nodes. This permission set allows the CNI to list, describe, and modify Elastic Network Interfaces on your behalf. More information on the AWS VPC CNI Plugin is available here: https://github.com/aws/amazon-vpc-cni-k8s

`AmazonEKS_CNI_Policy` is an AWS managed policy.

Using this policy

You can attach `AmazonEKS_CNI_Policy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy

- **Creation time**: May 27, 2018, 21:07 UTC
- **Edited time:** March 04, 2026, 19:12 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonEKS_CNI_Policy`

Policy version

Policy version: v6 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AmazonEKSDashboardConsoleReadOnly

Description: Provides read only access to view the dashboard in the Amazon EKS console. The dashboard aggregates information about multiple clusters and related resources using AWS Organizations.

`AmazonEKSDashboardConsoleReadOnly` is an AWS managed policy.

Using this policy

You can attach `AmazonEKSDashboardConsoleReadOnly` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: June 19, 2025, 17:22 UTC
- **Edited time:** February 12, 2026, 17:59 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonEKSDashboardConsoleReadOnly`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "AmazonEKSDashboardReadOnly",

AmazonEKSDashboardServiceRolePolicy

Description: This policy enables the Amazon EKS Dashboard to access and display organization-wide information. The policy allows the EKS Dashboard service to gather information about your AWS Organizations structure and accounts.

`AmazonEKSDashboardServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: May 08, 2025, 19:07 UTC
- **Edited time:** May 08, 2025, 19:07 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonEKSDashboardServiceRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "AllowOrganizationsReadActions",
      "Effect" : "Allow",
      "Action" : [
        "organizations:ListAccounts",
```

```
        "organizations:ListRoots",
        "organizations:ListChildren",
        "organizations:ListDelegatedAdministrators",
        "organizations:ListAWSServiceAccessForOrganization",
        "organizations:DescribeOrganization",
        "organizations:DescribeAccount"
      ],
      "Resource" : "*"
    }
  ]
}
```

AmazonEKSLoadBalancingPolicy

Description: Policy attached to the EKS Cluster Role that grants permissions to manage the cluster's load balancing resources.

`AmazonEKSLoadBalancingPolicy` is an AWS managed policy.

Using this policy

You can attach `AmazonEKSLoadBalancingPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: October 30, 2024, 20:18 UTC
- **Edited time:** April 01, 2026, 22:57 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonEKSLoadBalancingPolicy`

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

AmazonEKSLocalOutpostClusterPolicy

Description: This policy provides permissions to EKS local cluster's control-plane instances running in your account to manage resources on your behalf.

`AmazonEKSLocalOutpostClusterPolicy` is an AWS managed policy.

Using this policy

You can attach `AmazonEKSLocalOutpostClusterPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: August 24, 2022, 21:56 UTC
- **Edited time:** October 24, 2024, 17:59 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonEKSLocalOutpostClusterPolicy`

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonEKSLocalOutpostServiceRolePolicy

Description: Allows Amazon EKS Local to call AWS services on your behalf.

`AmazonEKSLocalOutpostServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: August 23, 2022, 21:53 UTC
- **Edited time:** June 26, 2025, 18:22 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonEKSLocalOutpostServiceRolePolicy`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonEKSMCPReadOnlyAccess

Description: Provides read-only access to the Amazon EKS MCP service. This policy grants permissions to use only read-only tools in the EKS MCP service meant for observability, troubleshooting, retrieving EKS resource information, and getting EKS-optimized suggestions.

`AmazonEKSMCPReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonEKSMCPReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: November 20, 2025, 17:19 UTC
- **Edited time:** February 12, 2026, 18:02 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonEKSMCPReadOnlyAccess`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonEKSVPCResourceController

Description: Policy used by VPC Resource Controller to manage ENI and IPs for worker nodes.

`AmazonEKSVPCResourceController` is an AWS managed policy.

Using this policy

You can attach `AmazonEKSVPCResourceController` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: August 12, 2020, 00:55 UTC
- **Edited time:** August 12, 2020, 00:55 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonEKSVPCResourceController`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
```

```
      "Action" : "ec2:CreateNetworkInterfacePermission",
      "Resource" : "*",
      "Condition" : {
        "ForAnyValue:StringEquals" : {
          "ec2:ResourceTag/eks:eni:owner" : "eks-vpc-resource-controller"
        }
      }
    },
    {
      "Effect" : "Allow",
      "Action" : [
        "ec2:CreateNetworkInterface",
        "ec2:DetachNetworkInterface",
        "ec2:ModifyNetworkInterfaceAttribute",
        "ec2:DeleteNetworkInterface",
        "ec2:AttachNetworkInterface",
        "ec2:UnassignPrivateIpAddresses",
        "ec2:AssignPrivateIpAddresses"
      ],

AmazonEKSWorkerNodeMinimalPolicy

Description: This policy allows Amazon EKS worker nodes to connect to Amazon EKS Clusters.

`AmazonEKSWorkerNodeMinimalPolicy` is an AWS managed policy.

Using this policy

You can attach `AmazonEKSWorkerNodeMinimalPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: October 02, 2024, 20:03 UTC
- **Edited time:** October 02, 2024, 20:03 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonEKSWorkerNodeMinimalPolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "WorkerNodePermissions",

AmazonElastiCacheReadOnlyAccess

Description: Provides read only access to Amazon ElastiCache via the AWS Management Console.

`AmazonElastiCacheReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonElastiCacheReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: February 06, 2015, 18:40 UTC
- **Edited time:** February 06, 2015, 18:40 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonElastiCacheReadOnlyAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Action" : [
        "elasticache:Describe*"
      ],
      "Effect" : "Allow",
      "Resource" : "*"
    }
  ]
}
```

AmazonElasticFileSystemServiceRolePolicy

Description: Allows Amazon Elastic File System to manage AWS resources on your behalf

`AmazonElasticFileSystemServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: November 05, 2019, 16:52 UTC
- **Edited time:** November 07, 2024, 19:19 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonElasticFileSystemServiceRolePolicy`

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AmazonElasticFileSystemsUtils

Description: Allows customers to use AWS Systems Manager to automatically manage Amazon EFS utilities (amazon-efs-utils) package on their EC2 instances, and use CloudWatchLog to get EFS file system mount success/failure notifications.

`AmazonElasticFileSystemsUtils` is an AWS managed policy.

Using this policy

You can attach `AmazonElasticFileSystemsUtils` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: September 29, 2020, 15:16 UTC
- **Edited time:** April 07, 2026, 13:12 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonElasticFileSystemsUtils`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonElasticMapReduceEditorsRole

Description: Default policy for the Amazon Elastic MapReduce Editors service role.

`AmazonElasticMapReduceEditorsRole` is an AWS managed policy.

Using this policy

You can attach `AmazonElasticMapReduceEditorsRole` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: November 16, 2018, 21:55 UTC
- **Edited time:** February 09, 2023, 22:39 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonElasticMapReduceEditorsRole`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",

AmazonElasticsearchServiceRolePolicy

Description: Allow Amazon Elasticsearch Service to access other AWS services such as EC2 Networking APIs on your behalf.

`AmazonElasticsearchServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: July 07, 2017, 00:15 UTC
- **Edited time:** October 23, 2023, 06:58 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonElasticsearchServiceRolePolicy`

Policy version

Policy version: v7 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AmazonElasticTranscoder_FullAccess

Description: Grants users full access to Elastic Transcoder and the access to associated services that is required for full Elastic Transcoder functionality.

`AmazonElasticTranscoder_FullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonElasticTranscoder_FullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: April 27, 2018, 18:59 UTC
- **Edited time:** June 10, 2019, 22:51 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonElasticTranscoder_FullAccess`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Action" : [
        "elastictranscoder:*",
        "s3:ListAllMyBuckets",
        "s3:ListBucket",
        "iam:ListRoles",
        "sns:ListTopics"
      ],
      "Effect" : "Allow",
      "Resource" : "*"
    },
    {
      "Action" : [
        "iam:PassRole"
      ],
      "Effect" : "Allow",
      "Resource" : "*",
      "Condition" : {
        "StringLike" : {
          "iam:PassedToService" : [
            "elastictranscoder.amazonaws.com"
          ]
        }
      }

AmazonElasticTranscoder_JobsSubmitter

Description: Grants users permission to change presets, submit jobs, and view Elastic Transcoder settings. This policy also grants some read-only access to some other services required to use the Elastic Transcode console, including S3, IAM, and SNS.

`AmazonElasticTranscoder_JobsSubmitter` is an AWS managed policy.

Using this policy

You can attach `AmazonElasticTranscoder_JobsSubmitter` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: June 07, 2018, 21:12 UTC
- **Edited time:** June 10, 2019, 22:49 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonElasticTranscoder_JobsSubmitter`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Action" : [
```

```
        "elastictranscoder:Read*",

`AmazonEMRServerlessServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: May 20, 2022, 23:15 UTC
- **Edited time:** January 25, 2024, 18:21 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonEMRServerlessServiceRolePolicy`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonEMRServicePolicy_v2

Description: This policy is used for the Amazon EMR Service Role and should NOT be used for any other IAM users or roles in your account. The policy grants permissions to create and manage resources associated with EMR and related services necessary for the operation of your EMR cluster.

`AmazonEMRServicePolicy_v2` is an AWS managed policy.

Using this policy

You can attach `AmazonEMRServicePolicy_v2` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: March 12, 2021, 01:11 UTC
- **Edited time:** February 12, 2026, 18:01 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonEMRServicePolicy_v2`

Policy version

Policy version: v6 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonESCognitoAccess

Description: Provides limited access to the Amazon Cognito configuration service.

`AmazonESCognitoAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonESCognitoAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: February 28, 2018, 22:29 UTC
- **Edited time:** December 20, 2021, 14:04 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonESCognitoAccess`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AmazonESFullAccess

Description: Provides full access to the Amazon ES configuration service.

`AmazonESFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonESFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: October 01, 2015, 19:14 UTC
- **Edited time:** October 01, 2015, 19:14 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonESFullAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Action" : [
        "es:*"
      ],
      "Effect" : "Allow",
      "Resource" : "*"
    }
  ]
}
```

AmazonEventBridgeApiDestinationsServiceRolePolicy

Description: Allows EventBridge to access Secret Manager resources on your behalf.

`AmazonEventBridgeApiDestinationsServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: February 11, 2021, 20:52 UTC
- **Edited time:** February 12, 2026, 17:58 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonEventBridgeApiDestinationsServiceRolePolicy`

Policy version

Policy version: v7 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "secretsmanager:CreateSecret",
        "secretsmanager:UpdateSecret",
        "secretsmanager:DescribeSecret",
        "secretsmanager:DeleteSecret",
        "secretsmanager:GetSecretValue",
        "secretsmanager:PutSecretValue"
      ],
      "Resource" : "arn:aws:secretsmanager:*:*:secret:events!connection/*",
      "Condition" : {
        "StringEquals" : {
```

```
          "aws:ResourceAccount" : "${aws:PrincipalAccount}"
        }
      }
    },
    {
      "Effect" : "Allow",
      "Action" : [
        "kms:Decrypt",
        "kms:Encrypt",
        "kms:GenerateDataKey"
      ],
      "Resource" : "arn:aws:kms:*:*:key/*",
      "Condition" : {
        "StringLike" : {
          "kms:ViaService" : "secretsmanager.*.amazonaws.com",
          "kms:EncryptionContext:SecretARN" : [
            "arn:aws:secretsmanager:*:*:secret:events!connection/*"
          ]
        },
        "StringEquals" : {
          "aws:ResourceTag/EventBridgeApiDestinations" : "true"
        }
      }
    }
  ]
}
```

AmazonEventBridgePipesFullAccess

Description: Provides full access to Amazon EventBridge Pipes.

`AmazonEventBridgePipesFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonEventBridgePipesFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy

- **Creation time**: December 01, 2022, 17:03 UTC
- **Edited time:** December 01, 2022, 17:03 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonEventBridgePipesFullAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "EventBridgePipesActions",
      "Effect" : "Allow",
      "Action" : "pipes:*",
      "Resource" : "*"
    },
    {
      "Sid" : "IAMPassRoleAccessForPipes",
      "Effect" : "Allow",
      "Action" : "iam:PassRole",
      "Resource" : "arn:aws:iam::*:role/*",
      "Condition" : {
        "StringLike" : {
          "iam:PassedToService" : "pipes.amazonaws.com"
        }
      }
    }
  ]
}
```

AmazonEventBridgeSchedulerFullAccess

Description: The AmazonEventBridgeSchedulerFullAccess managed policy grants permissions to use all EventBridge Scheduler actions for schedules, and schedule groups.

`AmazonEventBridgeSchedulerFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonEventBridgeSchedulerFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: November 10, 2022, 18:37 UTC
- **Edited time:** February 12, 2026, 18:03 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonEventBridgeSchedulerFullAccess`

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : "scheduler:*",
      "Resource" : "*"
    },
    {
      "Effect" : "Allow",
      "Action" : "iam:PassRole",
      "Resource" : "arn:aws:iam::*:role/*",
```

```
      "Condition" : {
        "StringLike" : {
          "iam:PassedToService" : "scheduler.amazonaws.com"
        }
      }
    }
  ]
}
```

AmazonFISServiceRolePolicy

Description: Policy to enable AWS FIS to manage monitoring and resource selection for experiments.

`AmazonFISServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: December 21, 2020, 21:18 UTC
- **Edited time:** October 25, 2022, 09:05 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonFISServiceRolePolicy`

Policy version

Policy version: v7 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AmazonForecastFullAccess

Description: Gives access to all actions for Amazon Forecast

`AmazonForecastFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonForecastFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: January 18, 2019, 01:52 UTC
- **Edited time:** January 18, 2019, 01:52 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonForecastFullAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "forecast:*"
      ],
      "Resource" : "*"
    },
    {
      "Effect" : "Allow",

AmazonFSxConsoleReadOnlyAccess

Description: Provides read only access to Amazon FSx and access to related AWS services via the AWS Management Console.

`AmazonFSxConsoleReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonFSxConsoleReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: November 28, 2018, 16:35 UTC
- **Edited time:** February 12, 2026, 17:59 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonFSxConsoleReadOnlyAccess`

Policy version

Policy version: v8 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
```

```
  "Statement" : [
    {

AmazonGrafanaCloudWatchAccess

Description: This policy grants access to Amazon CloudWatch and the dependencies needed to use CloudWatch as a datasource within Amazon Managed Grafana.

`AmazonGrafanaCloudWatchAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonGrafanaCloudWatchAccess` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: March 24, 2023, 22:41 UTC
- **Edited time:** March 24, 2023, 22:41 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonGrafanaCloudWatchAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "cloudwatch:DescribeAlarmsForMetric",
        "cloudwatch:DescribeAlarmHistory",
        "cloudwatch:DescribeAlarms",
        "cloudwatch:ListMetrics",
        "cloudwatch:GetMetricStatistics",
        "cloudwatch:GetMetricData",
        "cloudwatch:GetInsightRuleReport"
      ],
      "Resource" : "*"
    },
    {

AmazonGuardDutyMalwareProtectionServiceRolePolicy

Description: GuardDuty malware protection uses the service-linked role (SLR) named AWSServiceRoleForAmazonGuardDutyMalwareProtection. This service-linked role allows GuardDuty malware protection to perform agent-less scans to detect malware. It allows GuardDuty to create snapshots in your account, and share the snapshots with the GuardDuty service account to scan for malware. It evaluates these shared snapshots and includes the retrieved EC2 instance metadata in the GuardDuty Malware Protection findings. The AWSServiceRoleForAmazonGuardDutyMalwareProtection service-linked role trusts the malware-protection.guardduty.amazonaws.com service to assume the role.

`AmazonGuardDutyMalwareProtectionServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: July 19, 2022, 19:06 UTC
- **Edited time:** January 25, 2024, 22:24 UTC

AmazonGuardDutyReadOnlyAccess

Description: Provides read only access to Amazon GuardDuty resources

`AmazonGuardDutyReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonGuardDutyReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: November 28, 2017, 22:29 UTC
- **Edited time:** November 16, 2023, 23:07 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonGuardDutyReadOnlyAccess`

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "guardduty:Describe*",
        "guardduty:Get*",
        "guardduty:List*"
      ],
      "Resource" : "*"
    },
    {
      "Effect" : "Allow",

AmazonGuardDutyServiceRolePolicy

Description: Enable access to AWS Resources used or managed by Amazon Guard Duty

`AmazonGuardDutyServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: November 28, 2017, 20:12 UTC
- **Edited time:** March 25, 2026, 20:57 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonGuardDutyServiceRolePolicy`

Policy version

Policy version: v11 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

AmazonHoneycodeTeamAssociationReadOnlyAccess

Description: Provides read only access to Honeycode Team Association via the AWS Management Console and the SDK.

`AmazonHoneycodeTeamAssociationReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonHoneycodeTeamAssociationReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: June 24, 2020, 20:27 UTC
- **Edited time:** June 24, 2020, 20:27 UTC

- **ARN**: `arn:aws:iam::aws:policy/AmazonHoneycodeTeamAssociationReadOnlyAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Action" : [
        "honeycode:ListTeamAssociations"
      ],
      "Resource" : "*",
      "Effect" : "Allow"
    }
  ]
}
```

AmazonInspector2ServiceRolePolicy

Description: Grants Amazon Inspector access to AWS services needed to perform security assessments

`AmazonInspector2ServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: November 16, 2021, 20:27 UTC
- **Edited time:** February 13, 2026, 17:12 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonInspector2ServiceRolePolicy`

Policy version

Policy version: v26 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonInspectorFullAccess

Description: Provides full access to Amazon Inspector.

`AmazonInspectorFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonInspectorFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: October 07, 2015, 17:08 UTC
- **Edited time:** December 21, 2017, 14:53 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonInspectorFullAccess`

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonKendraReadOnlyAccess

Description: Provides read only access to Amazon Kendra via the AWS Management Console.

`AmazonKendraReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonKendraReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy

- **Creation time**: December 03, 2019, 16:13 UTC
- **Edited time:** May 27, 2021, 17:01 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonKendraReadOnlyAccess`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "kendra:Describe*",
        "kendra:List*",
        "kendra:Query",
        "kendra:GetQuerySuggestions"
      ],
      "Resource" : "*"
    }
  ]
}
```

AmazonKeyspacesFullAccess

Description: Provide full access to Amazon Keyspaces

`AmazonKeyspacesFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonKeyspacesFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: April 23, 2020, 17:06 UTC
- **Edited time:** February 12, 2026, 18:00 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonKeyspacesFullAccess`

Policy version

Policy version: v8 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AmazonKinesisVideoStreamsReadOnlyAccess

Description: Provides read only access to AWS Kinesis Video Streams via the AWS Management Console.

`AmazonKinesisVideoStreamsReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonKinesisVideoStreamsReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: December 01, 2017, 23:14 UTC
- **Edited time:** December 01, 2017, 23:14 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonKinesisVideoStreamsReadOnlyAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
```

```
        "kinesisvideo:Describe*",
        "kinesisvideo:Get*",
        "kinesisvideo:List*"
      ],
      "Resource" : "*"
    }
  ]
}
```

AmazonLaunchWizard_Fullaccess

Description: Full access to AWS Launch wizard and other required services.

`AmazonLaunchWizard_Fullaccess` is an AWS managed policy.

Using this policy

You can attach `AmazonLaunchWizard_Fullaccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: August 06, 2020, 17:47 UTC
- **Edited time:** February 22, 2023, 17:25 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonLaunchWizard_Fullaccess`

Policy version

Policy version: v15 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonLaunchWizardFullAccessV2

Description: Full access to AWS Launch wizard and other required services.

`AmazonLaunchWizardFullAccessV2` is an AWS managed policy.

Using this policy

You can attach `AmazonLaunchWizardFullAccessV2` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: September 01, 2023, 17:14 UTC
- **Edited time:** September 01, 2023, 17:14 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonLaunchWizardFullAccessV2`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonLexChannelsAccess

Description: This policy allows customers to call Lex runtime from channels

`AmazonLexChannelsAccess` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: January 13, 2021, 20:12 UTC
- **Edited time:** January 13, 2021, 20:12 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonLexChannelsAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Action" : [
        "lex:ListBots"
      ],
      "Effect" : "Allow",
      "Resource" : "*"
    }
  ]
}
```

- Get started with AWS managed policies and move toward least-privilege permissions

AmazonLexFullAccess

Description: Provides full access to Amazon Lex via the AWS Management Console. Also provides access to create Lex Service Linked Roles and grant Lex permissions to invoke a limited set of Lambda functions.

`AmazonLexFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonLexFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: April 11, 2017, 23:20 UTC
- **Edited time:** April 16, 2024, 20:06 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonLexFullAccess`

Policy version

Policy version: v9 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonLexReadOnly

Description: Provides read-only access to Amazon Lex.

`AmazonLexReadOnly` is an AWS managed policy.

Using this policy

You can attach `AmazonLexReadOnly` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: April 11, 2017, 23:13 UTC
- **Edited time:** May 13, 2024, 16:58 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonLexReadOnly`

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonLexReplicationPolicy

Description: Allows Amazon Lex to replicate Lex resources across regions on your behalf.

`AmazonLexReplicationPolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: January 31, 2024, 23:29 UTC
- **Edited time:** June 24, 2025, 21:52 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonLexReplicationPolicy`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

AmazonLookoutVisionFullAccess

Description: Provides full access to Amazon Lookout for Vision and scoped access to required dependencies.

`AmazonLookoutVisionFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonLookoutVisionFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: May 11, 2021, 19:24 UTC
- **Edited time:** May 11, 2021, 19:24 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonLookoutVisionFullAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "LookoutVisionFullAccess",
      "Effect" : "Allow",
      "Action" : [
        "lookoutvision:*"
      ],
      "Resource" : "*"
```

```
    }
  ]
}
```

AmazonLookoutVisionReadOnlyAccess

Description: Provides read only access to Amazon Lookout for Vision and scoped access to required dependencies.

`AmazonLookoutVisionReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonLookoutVisionReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: May 11, 2021, 19:11 UTC
- **Edited time:** December 09, 2021, 03:01 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonLookoutVisionReadOnlyAccess`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "LookoutVisionReadOnlyAccess",
      "Effect" : "Allow",
      "Action" : [
        "lookoutvision:DescribeDataset",
        "lookoutvision:DescribeModel",
        "lookoutvision:DescribeProject",
        "lookoutvision:DescribeModelPackagingJob",
        "lookoutvision:ListDatasetEntries",
        "lookoutvision:ListModels",
        "lookoutvision:ListProjects",
        "lookoutvision:ListTagsForResource",
        "lookoutvision:ListModelPackagingJobs"
      ],
      "Resource" : "*"
    }
  ]
}

- **Type**: AWS managed policy
- **Creation time**: April 29, 2019, 21:39 UTC

- **Edited time:** April 29, 2019, 21:39 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonManagedBlockchainFullAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "managedblockchain:*"
      ],
      "Resource" : [
        "*"
      ]
    }
  ]
}
```

AmazonManagedBlockchainReadOnlyAccess

Description: Provides read-only access to Amazon Managed Blockchain.

`AmazonManagedBlockchainReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonManagedBlockchainReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: April 30, 2019, 18:17 UTC
- **Edited time:** April 30, 2019, 18:17 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonManagedBlockchainReadOnlyAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "managedblockchain:Get*",
        "managedblockchain:List*"
      ],
      "Resource" : [
        "*"
      ]
    }
  ]
}
```

AmazonManagedBlockchainServiceRolePolicy

Description: Enables access to AWS services and Resources used or managed by Amazon Managed Blockchain

`AmazonManagedBlockchainServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: January 17, 2020, 19:51 UTC
- **Edited time:** January 17, 2020, 19:51 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonManagedBlockchainServiceRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Action" : [
        "logs:CreateLogGroup"
      ],
      "Effect" : "Allow",
      "Resource" : "arn:aws:logs:*:*:log-group:/aws/managedblockchain/*"
    },
    {
      "Effect" : "Allow",
      "Action" : [
        "logs:CreateLogStream",
        "logs:PutLogEvents",
        "logs:DescribeLogStreams"
      ],
      "Resource" : [
        "arn:aws:logs:*:*:log-group:/aws/managedblockchain/*:log-stream:*"
      ]
    }
  ]
}
```

`AmazonMQApiReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonMQApiReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: December 18, 2018, 20:31 UTC
- **Edited time:** December 18, 2018, 20:31 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonMQApiReadOnlyAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Action" : [
        "mq:Describe*",
        "mq:List*",
```

```
        "ec2:DescribeNetworkInterfaces",
        "ec2:DescribeSecurityGroups",
        "ec2:DescribeSubnets",
        "ec2:DescribeVpcs"
      ],
      "Effect" : "Allow",
      "Resource" : "*"
    }
  ]
}
```

AmazonMQFullAccess

Description: Provides full access to AmazonMQ via the AWS Management Console.

`AmazonMQFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonMQFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: November 28, 2017, 15:28 UTC
- **Edited time:** November 04, 2020, 16:34 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonMQFullAccess`

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "mq:*",
        "cloudformation:CreateStack",
        "ec2:CreateNetworkInterface",
        "ec2:CreateNetworkInterfacePermission",
        "ec2:DeleteNetworkInterface",
        "ec2:DeleteNetworkInterfacePermission",
        "ec2:DetachNetworkInterface",
        "ec2:DescribeInternetGateways",
        "ec2:DescribeNetworkInterfaces",
        "ec2:DescribeNetworkInterfacePermissions",
        "ec2:DescribeRouteTables",
        "ec2:DescribeSecurityGroups",
        "ec2:DescribeSubnets",
        "ec2:DescribeVpcs",
        "ec2:CreateSecurityGroup",
        "ec2:AuthorizeSecurityGroupIngress"
      ],
      "Resource" : "*"
    },
    {
      "Effect" : "Allow",
      "Action" : [
        "logs:CreateLogGroup"
      ],
      "Resource" : [
        "arn:aws:logs:*:*:log-group:/aws/amazonmq/*"
      ]
    },
    {
      "Action" : "iam:CreateServiceLinkedRole",
      "Effect" : "Allow",
```

```
      "Resource" : "*",
      "Condition" : {
        "StringLike" : {
          "iam:AWSServiceName" : "mq.amazonaws.com"
        }
      }
    }
  ]
}
```

AmazonMQServiceRolePolicy

Description: Service Linked Role Policy for AWS Amazon MQ

`AmazonMQServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: November 04, 2020, 16:07 UTC
- **Edited time:** November 04, 2020, 16:07 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonMQServiceRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "ec2:DescribeVpcEndpoints"
      ],
      "Resource" : "*"
    },

AmazonNimbleStudio-LaunchProfileWorker

Description: This policy grants access to resources needed by Nimble Studio Launch Profile workers. Attach this policy to EC2 instances created by Nimble Studio Builder.

`AmazonNimbleStudio-LaunchProfileWorker` is an AWS managed policy.

Using this policy

You can attach `AmazonNimbleStudio-LaunchProfileWorker` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: April 28, 2021, 04:47 UTC
- **Edited time:** April 28, 2021, 04:47 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonNimbleStudio-LaunchProfileWorker`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "ec2:DescribeNetworkInterfaces",
        "ec2:DescribeSecurityGroups",
        "fsx:DescribeFileSystems",
        "ds:DescribeDirectories"
      ],
      "Resource" : [
        "*"
      ],
      "Condition" : {
        "StringEquals" : {
          "aws:CalledViaLast" : "nimble.amazonaws.com"
        }
```

```
      },
      "Sid" : "GetLaunchProfileInitializationDependencies"
    }
  ],

AmazonOpenSearchIngestionReadOnlyAccess

Description: Provides read only access to the Amazon OpenSearch Ingestion Service

`AmazonOpenSearchIngestionReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonOpenSearchIngestionReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: April 26, 2023, 18:09 UTC
- **Edited time:** April 26, 2023, 18:09 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonOpenSearchIngestionReadOnlyAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonPersonalizeFullAccess

Description: Provides full access to Amazon Personalize via the AWS Management Console and SDK. Also provides select access to related services (e.g., S3, CloudWatch).

`AmazonPersonalizeFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonPersonalizeFullAccess` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: December 04, 2018, 22:24 UTC
- **Edited time:** May 30, 2019, 23:46 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonPersonalizeFullAccess`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {

AmazonPollyFullAccess

Description: Grants full access to Amazon Polly service and resources.

`AmazonPollyFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonPollyFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: November 30, 2016, 18:59 UTC
- **Edited time:** November 30, 2016, 18:59 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonPollyFullAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "polly:*"
      ],
      "Resource" : [
        "*"
      ]
    }
  ]
}
```

AmazonPollyReadOnlyAccess

Description: Grants read-only access to Amazon Polly resources.

`AmazonPollyReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonPollyReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: November 30, 2016, 18:59 UTC
- **Edited time:** April 01, 2026, 08:12 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonPollyReadOnlyAccess`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "polly:DescribeVoices",
        "polly:GetLexicon",
        "polly:GetSpeechSynthesisTask",
        "polly:ListLexicons",
        "polly:ListSpeechSynthesisTasks",
        "polly:SynthesizeSpeech",
        "polly:StartSpeechSynthesisStream"
      ],
      "Resource" : [
        "*"
      ]
    }
  ]
```

```
}
```

AmazonQLDBFullAccess

Description: Provides full access to Amazon QLDB via the service API.

`AmazonQLDBFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonQLDBFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: September 05, 2019, 18:23 UTC
- **Edited time:** November 04, 2022, 17:01 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonQLDBFullAccess`

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "qldb:CreateLedger",
        "qldb:UpdateLedger",

AmazonQLDBReadOnly

Description: Provides read only access to Amazon QLDB.

`AmazonQLDBReadOnly` is an AWS managed policy.

Using this policy

You can attach `AmazonQLDBReadOnly` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: September 05, 2019, 18:19 UTC
- **Edited time:** July 02, 2021, 02:17 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonQLDBReadOnly`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
```

```
      "Effect" : "Allow",
      "Action" : [
        "qldb:ListLedgers",
        "qldb:DescribeLedger",
        "qldb:ListJournalS3Exports",
        "qldb:ListJournalS3ExportsForLedger",
        "qldb:DescribeJournalS3Export",
        "qldb:DescribeJournalKinesisStream",
        "qldb:ListJournalKinesisStreamsForLedger",
        "qldb:GetBlock",
        "qldb:GetDigest",
        "qldb:GetRevision",
        "qldb:ListTagsForResource"
      ],
      "Resource" : "*"
    }
  ]
}
```

AmazonRDSBetaServiceRolePolicy

Description: Allows Amazon RDS to manage AWS resources on your behalf.

`AmazonRDSBetaServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy

- **Creation time**: May 02, 2018, 19:41 UTC
- **Edited time:** August 07, 2024, 00:54 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonRDSBetaServiceRolePolicy`

Policy version

Policy version: v9 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AmazonRDSCustomPreviewServiceRolePolicy

Description: Amazon RDS Custom Preview Service Role Policy

`AmazonRDSCustomPreviewServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: October 08, 2021, 21:44 UTC
- **Edited time:** February 12, 2026, 17:58 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonRDSCustomPreviewServiceRolePolicy`

Policy version

Policy version: v15 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonRDSCustomServiceRolePolicy

Description: Allows Amazon RDS Custom to manage AWS resources on your behalf.

`AmazonRDSCustomServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: October 08, 2021, 21:39 UTC
- **Edited time:** February 12, 2026, 17:57 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonRDSCustomServiceRolePolicy`

Policy version

Policy version: v19 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonRDSDataFullAccess

Description: Allows full access to use the RDS data APIs, secret store APIs for RDS database credentials, and DB console query management APIs to execute SQL statements on Aurora Serverless clusters in the AWS account.

`AmazonRDSDataFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonRDSDataFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: November 20, 2018, 21:29 UTC
- **Edited time:** November 20, 2019, 21:58 UTC

- **ARN**: `arn:aws:iam::aws:policy/AmazonRDSDataFullAccess`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonRDSDirectoryServiceAccess

Description: Allow RDS to access Directory Service Managed AD on behalf of the customer for domain-joined SQL Server DB instances.

`AmazonRDSDirectoryServiceAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonRDSDirectoryServiceAccess` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: February 26, 2016, 02:02 UTC
- **Edited time:** May 15, 2019, 16:51 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonRDSDirectoryServiceAccess`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Action" : [
        "ds:DescribeDirectories",
        "ds:AuthorizeApplication",
        "ds:UnauthorizeApplication",
        "ds:GetAuthorizedApplicationDetails"
      ],
      "Effect" : "Allow",
      "Resource" : "*"
    }
  ]
}
```

AmazonRDSEnhancedMonitoringRole

Description: Provides access to Cloudwatch for RDS Enhanced Monitoring

`AmazonRDSEnhancedMonitoringRole` is an AWS managed policy.

Using this policy

You can attach `AmazonRDSEnhancedMonitoringRole` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: November 11, 2015, 19:58 UTC
- **Edited time:** November 11, 2015, 19:58 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonRDSEnhancedMonitoringRole`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "EnableCreationAndManagementOfRDSCloudwatchLogGroups",
      "Effect" : "Allow",
      "Action" : [
        "logs:CreateLogGroup",
        "logs:PutRetentionPolicy"
      ],
      "Resource" : [
        "arn:aws:logs:*:*:log-group:RDS*"
      ]
    },
    {
      "Sid" : "EnableCreationAndManagementOfRDSCloudwatchLogStreams",
      "Effect" : "Allow",
      "Action" : [
        "logs:CreateLogStream",
```

```
        "logs:PutLogEvents",
        "logs:DescribeLogStreams",
        "logs:GetLogEvents"
      ],
      "Resource" : [
        "arn:aws:logs:*:*:log-group:RDS*:log-stream:*"
      ]
    }
  ]
}
```

AmazonRDSFullAccess

Description: Provides full access to Amazon RDS via the AWS Management Console.

`AmazonRDSFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonRDSFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: February 06, 2015, 18:40 UTC
- **Edited time:** August 17, 2023, 23:00 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonRDSFullAccess`

Policy version

Policy version: v14 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AmazonRDSServiceRolePolicy

Description: Allows Amazon RDS to manage AWS resources on your behalf.

`AmazonRDSServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: January 08, 2018, 18:17 UTC

- **Edited time:** July 01, 2024, 22:42 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonRDSServiceRolePolicy`

Policy version

Policy version: v14 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonRedshiftAllCommandsFullAccess

Description: This policy includes permissions to run SQL commands to copy, load, unload, query, and analyze data on Amazon Redshift. The policy also grants permissions to run select statements for related services, such as Amazon S3, Amazon CloudWatch logs, Amazon SageMaker, or AWS Glue.

`AmazonRedshiftAllCommandsFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonRedshiftAllCommandsFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: November 04, 2021, 00:48 UTC
- **Edited time:** November 25, 2021, 02:27 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonRedshiftAllCommandsFullAccess`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonRedshiftFederatedAuthorization

Description: This is an ease-of-use policy for running queries with Amazon Redshift Federated Authorization

`AmazonRedshiftFederatedAuthorization` is an AWS managed policy.

Using this policy

You can attach `AmazonRedshiftFederatedAuthorization` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: November 22, 2025, 00:04 UTC
- **Edited time:** February 12, 2026, 17:58 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonRedshiftFederatedAuthorization`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```

AmazonRedshiftFullAccess

Description: Provides full access to Amazon Redshift via the AWS Management Console.

`AmazonRedshiftFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonRedshiftFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: February 06, 2015, 18:40 UTC
- **Edited time:** July 07, 2022, 23:31 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonRedshiftFullAccess`

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonRedshiftQueryEditorV2ReadWriteSharing

Description: Grants the ability to work with Amazon Redshift Query Editor V2 with sharing of resources. The granted principal can read, write and share its own resources. The granted principal can read and update the resources shared with its team. This policy also grants access to other required services. This includes permissions to list the Amazon Redshift clusters and manage the Query Editor V2 secrets of the principal in AWS Secrets Manager.

`AmazonRedshiftQueryEditorV2ReadWriteSharing` is an AWS managed policy.

Using this policy

You can attach `AmazonRedshiftQueryEditorV2ReadWriteSharing` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: September 24, 2021, 14:25 UTC
- **Edited time:** February 21, 2024, 17:30 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonRedshiftQueryEditorV2ReadWriteSharing`

Policy version

Policy version: v9 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonRedshiftReadOnlyAccess

Description: Provides read only access to Amazon Redshift via the AWS Management Console.

`AmazonRedshiftReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonRedshiftReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: February 06, 2015, 18:40 UTC
- **Edited time:** February 08, 2024, 00:24 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonRedshiftReadOnlyAccess`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
```

```
  "Version" : "2012-10-17",
  "Statement" : [
    {

AmazonRedshiftServiceLinkedRolePolicy

Description: Allows Amazon Redshift to call AWS services on your behalf

`AmazonRedshiftServiceLinkedRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: September 18, 2017, 19:19 UTC
- **Edited time:** February 19, 2025, 17:22 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonRedshiftServiceLinkedRolePolicy`

Policy version

Policy version: v15 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonRekognitionCustomLabelsFullAccess

Description: This policy specifies rekognition and s3 permissions required by Amazon Rekognition Custom Labels feature.

`AmazonRekognitionCustomLabelsFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonRekognitionCustomLabelsFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: January 08, 2020, 19:18 UTC
- **Edited time:** August 16, 2022, 20:20 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonRekognitionCustomLabelsFullAccess`

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "route53domains:Get*",
        "route53domains:List*"
      ],
      "Resource" : [
        "*"
      ]
    }
  ]
}
```

AmazonRoute53ResolverFullAccess

Description: Full access policy for Route 53 Resolver

`AmazonRoute53ResolverFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonRoute53ResolverFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: May 30, 2019, 18:10 UTC
- **Edited time:** August 05, 2024, 20:06 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonRoute53ResolverFullAccess`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "AmazonRoute53ResolverFullAccess",
      "Effect" : "Allow",
      "Action" : [
        "route53resolver:*",
```

```
        "ec2:DescribeSubnets",
        "ec2:CreateNetworkInterface",
        "ec2:DeleteNetworkInterface",
        "ec2:ModifyNetworkInterfaceAttribute",
        "ec2:DescribeNetworkInterfaces",
        "ec2:CreateNetworkInterfacePermission",
        "ec2:DescribeSecurityGroups",
        "ec2:DescribeVpcs",
        "ec2:DescribeAvailabilityZones"
      ],
      "Resource" : [
        "*"
      ]
    }
  ]
}
```

AmazonS3OutpostsReadOnlyAccess

Description: Provides read only access to Amazon S3 on Outposts via the AWS Management Console.

`AmazonS3OutpostsReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonS3OutpostsReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: October 02, 2020, 18:55 UTC
- **Edited time:** October 02, 2020, 18:55 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonS3OutpostsReadOnlyAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "s3-outposts:Get*",
        "s3-outposts:List*"
      ],
      "Resource" : "*"
    },
    {
```

```
      "Effect" : "Allow",
      "Action" : [
        "datasync:ListTasks",
        "datasync:ListLocations",
        "datasync:DescribeTask",
        "datasync:DescribeLocation*"
      ],
      "Resource" : "*"
    },
    {
      "Effect" : "Allow",
      "Action" : [
        "ec2:DescribeVpcs",
        "ec2:DescribeSubnets",
        "ec2:DescribeSecurityGroups",
        "ec2:DescribeNetworkInterfaces"
      ],
      "Resource" : "*"
    },
    {
      "Effect" : "Allow",
      "Action" : [
        "outposts:ListOutposts",
        "outposts:GetOutpost"
      ],
      "Resource" : "*"
    }
  ]
}
```

AmazonS3TablesFullAccess

Description: Provides full access to all S3 table buckets.

`AmazonS3TablesFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonS3TablesFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: December 03, 2024, 15:21 UTC
- **Edited time:** February 12, 2026, 18:00 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonS3TablesFullAccess`

Policy version

Policy version: v6 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
```

```
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [

AmazonS3TablesLakeFormationServiceRole

Description: This managed policy grants AWS Lake Formation permissions to act on all table buckets, namespaces, and tables within the account.

`AmazonS3TablesLakeFormationServiceRole` is an AWS managed policy.

Using this policy

You can attach AmazonS3TablesLakeFormationServiceRole to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: June 19, 2025, 19:07 UTC
- **Edited time:** February 12, 2026, 18:01 UTC
- **ARN**: arn:aws:iam::aws:policy/service-role/AmazonS3TablesLakeFormationServiceRole

Policy version

Policy version: v6 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{

AmazonSageMakerCanvasAIServicesAccess

Description: Provides permissions for Amazon SageMaker Canvas to use AI services to support ready to use AI solutions. This policy will add more mutating permissions for services as Amazon SageMaker Canvas adds support.

`AmazonSageMakerCanvasAIServicesAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerCanvasAIServicesAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: March 23, 2023, 22:36 UTC
- **Edited time:** November 29, 2023, 14:47 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonSageMakerCanvasAIServicesAccess`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonSageMakerCanvasBedrockAccess

Description: This policy grants permissions to use Amazon Bedrock in SageMaker Canvas by providing access to downstream services such as S3.

`AmazonSageMakerCanvasBedrockAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerCanvasBedrockAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: February 02, 2024, 18:37 UTC
- **Edited time:** February 02, 2024, 18:37 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonSageMakerCanvasBedrockAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "S3CanvasAccess",
      "Effect" : "Allow",
      "Action" : [
        "s3:GetObject",
        "s3:PutObject"
      ],
      "Resource" : [
        "arn:aws:s3:::sagemaker-*/Canvas",
        "arn:aws:s3:::sagemaker-*/Canvas/*"
      ]
    },
    {

AmazonSageMakerCanvasDataPrepFullAccess

Description: Provides full access to Amazon SageMaker resources and operations for data preparation in Canvas. The policy also provides select access to related services (e.g., S3, IAM, KMS, RDS, CloudWatch Logs, Redshift, Athena, Glue, EventBridge, Secrets Manager). This policy should be attached to the Amazon SageMaker Domain/User Profile execution role.

`AmazonSageMakerCanvasDataPrepFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerCanvasDataPrepFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: October 27, 2023, 22:56 UTC
- **Edited time:** August 16, 2024, 18:11 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonSageMakerCanvasDataPrepFullAccess`

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonSageMakerCanvasDirectDeployAccess

Description: Allows Amazon SageMaker Canvas to create, manage and view endpoint details for endpoints created through Canvas. Allows Amazon SageMaker Canvas to retrieve endpoint invocation metrics from CloudWatch.

`AmazonSageMakerCanvasDirectDeployAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerCanvasDirectDeployAccess` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: October 06, 2023, 18:11 UTC
- **Edited time:** October 06, 2023, 18:11 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonSageMakerCanvasDirectDeployAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "SageMakerEndpointPerms",

AmazonSageMakerCanvasEMRServerlessExecutionRolePolicy

Description: This policy grants permissions to Amazon EMR Serverless for services such as S3, used by Amazon SageMaker Canvas for large data processing.

`AmazonSageMakerCanvasEMRServerlessExecutionRolePolicy` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerCanvasEMRServerlessExecutionRolePolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: July 27, 2024, 00:35 UTC
- **Edited time:** July 27, 2024, 00:35 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonSageMakerCanvasEMRServerlessExecutionRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonSageMakerCanvasForecastAccess

Description: This policy grants permissions commonly needed to use SageMaker Canvas with Amazon Forecast.

`AmazonSageMakerCanvasForecastAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerCanvasForecastAccess` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: August 24, 2022, 20:04 UTC
- **Edited time:** August 24, 2022, 20:04 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonSageMakerCanvasForecastAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AmazonSageMakerCanvasFullAccess

Description: Provides full access to Amazon SageMaker Canvas resources and operations. The policy also provides select access to related services (e.g., S3, IAM, VPC, ECR, CloudWatch Logs,

Redshift, Secrets Manager, and Forecast). This policy should be attached to the Amazon SageMaker Domain/User Profile execution role.

`AmazonSageMakerCanvasFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerCanvasFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: September 09, 2022, 00:44 UTC
- **Edited time:** August 16, 2024, 04:35 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonSageMakerCanvasFullAccess`

Policy version

Policy version: v11 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonSageMakerCanvasSMDataScienceAssistantAccess

Description: Provides permissions for Amazon SageMaker Canvas to use the SageMaker Data Science Assistant service. The Data Science Assistant currently uses both Amazon SageMaker and Amazon Q Developer to process user prompts.

`AmazonSageMakerCanvasSMDataScienceAssistantAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerCanvasSMDataScienceAssistantAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: December 04, 2024, 14:06 UTC
- **Edited time:** February 12, 2026, 18:02 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonSageMakerCanvasSMDataScienceAssistantAccess`

Policy version

Policy version: v6 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "SageMakerDataScienceAssistantAccess",
      "Effect" : "Allow",
```

```
      "Action" : [
        "sagemaker-data-science-assistant:SendConversation"
      ],
      "Resource" : "*",
      "Condition" : {
        "StringEquals" : {
          "aws:ResourceAccount" : "${aws:PrincipalAccount}"
        }
      }
    },
    {
      "Sid" : "AmazonQDeveloperAccess",
      "Effect" : "Allow",
      "Action" : [
        "q:SendMessage",
        "q:StartConversation"
      ],
      "Resource" : "*",
      "Condition" : {
        "StringEquals" : {
          "aws:ResourceAccount" : "${aws:PrincipalAccount}"
        }
      }
    }
  ]
}
```

AmazonSageMakerCapacityReservationServiceRolePolicy

Description: This policy grants permissions to Amazon SageMaker Capacity Reservations to publish CloudWatch metrics into customer accounts for utilization visibility.

`AmazonSageMakerCapacityReservationServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: April 08, 2026, 20:27 UTC
- **Edited time:** April 08, 2026, 20:27 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonSageMakerCapacityReservationServiceRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "CloudwatchPutMetricDataAccess",

AmazonSageMakerClusterInstanceRolePolicy

Description: This policy grants permissions commonly needed to use Amazon SageMaker Cluster.

`AmazonSageMakerClusterInstanceRolePolicy` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerClusterInstanceRolePolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: November 29, 2023, 15:11 UTC
- **Edited time:** November 29, 2023, 15:11 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonSageMakerClusterInstanceRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonSageMakerCoreServiceRolePolicy

Description: Managed policy for Service Linked Role for Amazon SageMaker Core Services

`AmazonSageMakerCoreServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: December 21, 2020, 21:40 UTC
- **Edited time:** December 21, 2020, 21:40 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonSageMakerCoreServiceRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "ec2:CreateNetworkInterface",
        "ec2:DeleteNetworkInterface",
        "ec2:DeleteNetworkInterfacePermission"
      ],
      "Resource" : "*"
    },
    {
      "Effect" : "Allow",
      "Action" : [
        "ec2:CreateNetworkInterfacePermission"
      ],
      "Resource" : "*",
      "Condition" : {
        "StringEquals" : {
          "ec2:AuthorizedService" : "sagemaker.amazonaws.com"
        }
```

```
      }
    },
    {
      "Effect" : "Allow",
      "Action" : [
        "ec2:DescribeDhcpOptions",
        "ec2:DescribeNetworkInterfaces",
        "ec2:DescribeSecurityGroups",
        "ec2:DescribeSubnets",
        "ec2:DescribeVpcs"
      ],
      "Resource" : "*"
    }
  ]
}
```

AmazonSageMakerEdgeDeviceFleetPolicy

Description: Provides permissions necessary for SageMaker Edge to create and manage a device fleet for the customer using the default cloud connection.

`AmazonSageMakerEdgeDeviceFleetPolicy` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerEdgeDeviceFleetPolicy` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: December 08, 2020, 16:17 UTC
- **Edited time:** December 08, 2020, 16:17 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonSageMakerEdgeDeviceFleetPolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonSageMakerFeatureStoreAccess

Description: Provides permissions required to enable the offline store for an Amazon SageMaker FeatureStore feature group.

`AmazonSageMakerFeatureStoreAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerFeatureStoreAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: December 01, 2020, 16:24 UTC
- **Edited time:** December 05, 2022, 14:19 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonSageMakerFeatureStoreAccess`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AmazonSageMakerGeospatialExecutionRole

Description: This policy provide access to services that are commonly needed to use SageMaker geospatial.

`AmazonSageMakerGeospatialExecutionRole` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerGeospatialExecutionRole` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: November 30, 2022, 10:08 UTC
- **Edited time:** May 10, 2023, 20:28 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonSageMakerGeospatialExecutionRole`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "s3:AbortMultipartUpload",
        "s3:PutObject",
        "s3:GetObject",
        "s3:ListBucketMultipartUploads"
      ],
      "Resource" : [
        "arn:aws:s3:::*SageMaker*",
        "arn:aws:s3:::*Sagemaker*",
        "arn:aws:s3:::*sagemaker*"
      ]
    },
    {
      "Effect" : "Allow",
      "Action" : "sagemaker-geospatial:GetEarthObservationJob",
      "Resource" : "arn:aws:sagemaker-geospatial:*:*:earth-observation-job/*"
    },
    {
      "Effect" : "Allow",
      "Action" : "sagemaker-geospatial:GetRasterDataCollection",
      "Resource" : "arn:aws:sagemaker-geospatial:*:*:raster-data-collection/*"
    }
  ]
}
```

AmazonSageMakerGeospatialFullAccess

Description: This policy grants permissions that allow full access to Amazon SageMaker Geospatial through the AWS Management Console and SDK.

`AmazonSageMakerGeospatialFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerGeospatialFullAccess` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: November 30, 2022, 10:06 UTC
- **Edited time:** November 30, 2022, 10:06 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonSageMakerGeospatialFullAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : "sagemaker-geospatial:*",
      "Resource" : "*"
    },
```

```
    {

AmazonSageMakerGroundTruthExecution

Description: Provides access to AWS services that are required to run SageMaker GroundTruth Labeling job

`AmazonSageMakerGroundTruthExecution` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerGroundTruthExecution` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: July 09, 2020, 19:30 UTC

- **Edited time:** April 29, 2022, 20:49 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonSageMakerGroundTruthExecution`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

AmazonSageMakerHyperPodGatedModelAccess

Description: This Amazon Managed Policy provides the necessary permissions for SageMaker HyperPod to access gated models in SageMaker Jumpstart. It allows creating presigned URLs for hub content in the SageMaker Public Hub.

`AmazonSageMakerHyperPodGatedModelAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerHyperPodGatedModelAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: January 17, 2026, 01:04 UTC
- **Edited time:** February 12, 2026, 18:00 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonSageMakerHyperPodGatedModelAccess`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "CreatePresignedUrlAccess",
      "Effect" : "Allow",
      "Action" : [
        "sagemaker:CreateHubContentPresignedUrls"
      ],
```

```
      "Resource" : [
        "arn:aws:sagemaker:*:*:hub/SageMakerPublicHub",
        "arn:aws:sagemaker:*:*:hub-content/SageMakerPublicHub/*/*"
      ],
      "Condition" : {
        "StringEquals" : {
          "aws:ResourceAccount" : "${aws:PrincipalAccount}"
        }
      }
    }
  ]
}
```

AmazonSageMakerHyperPodInferenceAccess

Description: This policy provides administrative privileges required for setting up the SageMaker HyperPod inference operator. It enables the inference operator to access AWS networking resources, Amazon S3, Amazon ECR, Amazon CloudWatch, AWS Certificate Manager, and SageMaker resources necessary to deploy and manage inference workloads on HyperPod clusters

`AmazonSageMakerHyperPodInferenceAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerHyperPodInferenceAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: January 27, 2026, 20:34 UTC
- **Edited time:** February 12, 2026, 18:01 UTC

- **ARN**: `arn:aws:iam::aws:policy/AmazonSageMakerHyperPodInferenceAccess`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonSageMakerHyperPodObservabilityAdminAccess

Description: This policy provides administrative privileges required for setting up SageMaker HyperPod observability. It enables access to Amazon Managed Prometheus, Amazon Managed

Grafana and EKS Addons. The policy also includes broad access to Grafana HTTP APIs through ServiceAccountTokens across all Amazon Managed Grafana workspaces in your account.

`AmazonSageMakerHyperPodObservabilityAdminAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerHyperPodObservabilityAdminAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: July 10, 2025, 14:37 UTC
- **Edited time:** February 12, 2026, 17:57 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonSageMakerHyperPodObservabilityAdminAccess`

Policy version

Policy version: v6 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonSageMakerHyperPodServiceRolePolicy

Description: This policy grants permissions to Amazon SageMaker HyperPod to related AWS services such as Amazon EKS, Amazon CloudWatch etc.

`AmazonSageMakerHyperPodServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: September 06, 2024, 17:04 UTC
- **Edited time:** September 06, 2024, 17:04 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonSageMakerHyperPodServiceRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "EKSClusterDescribePermissions",
```

```
      "Effect" : "Allow",
      "Action" : "eks:DescribeCluster",
      "Resource" : "*",
      "Condition" : {
        "StringEquals" : {
          "aws:ResourceAccount" : "${aws:PrincipalAccount}"
        }
      }
    },
    {
      "Sid" : "CloudWatchLogGroupPermissions",
      "Effect" : "Allow",
      "Action" : [
        "logs:CreateLogGroup"
      ],
      "Resource" : "arn:aws:logs:*:*:log-group:/aws/sagemaker/Clusters/*",
      "Condition" : {
        "StringEquals" : {
          "aws:ResourceAccount" : "${aws:PrincipalAccount}"
        }
      }
    },
    {
      "Sid" : "CloudWatchLogStreamPermissions",
      "Effect" : "Allow",
      "Action" : [
        "logs:CreateLogStream",
        "logs:PutLogEvents"
      ],
      "Resource" : "arn:aws:logs:*:*:log-group:/aws/sagemaker/Clusters/*:log-stream:*",
      "Condition" : {
        "StringEquals" : {
          "aws:ResourceAccount" : "${aws:PrincipalAccount}"
        }
      }
    }
  ]
}
```

AmazonSageMakerHyperPodTrainingOperatorAccess

Description: This policy provides administrative permissions required to set up the SageMaker HyperPod training operator. It enables access to Amazon SageMaker HyperPod and EKS add-ons. The policy includes permissions to describe the SageMaker HyperPod resources in your account.

`AmazonSageMakerHyperPodTrainingOperatorAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerHyperPodTrainingOperatorAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: August 19, 2025, 17:04 UTC
- **Edited time:** February 12, 2026, 17:58 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonSageMakerHyperPodTrainingOperatorAccess`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "AllowDescribeClusterNodeOnHyperPodClusters",
      "Effect" : "Allow",
      "Action" : "sagemaker:DescribeClusterNode",
      "Resource" : "arn:aws:sagemaker:*:*:cluster/*",
```

```
      "Condition" : {
        "StringEquals" : {
          "aws:ResourceTag/SageMaker" : "true"
        }
      }
    }
  ]
}
```

AmazonSageMakerNotebooksServiceRolePolicy

Description: Managed policy for Service Linked Role for Amazon SageMaker Notebooks

`AmazonSageMakerNotebooksServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: October 18, 2019, 20:27 UTC
- **Edited time:** December 10, 2025, 18:34 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonSageMakerNotebooksServiceRolePolicy`

Policy version

Policy version: v11 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonSageMakerPartnerAppsFullAccess

Description: Enables Amazon SageMaker partner app users to access applications, list available applications, launch application web UIs, and connect via the application SDK.

`AmazonSageMakerPartnerAppsFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerPartnerAppsFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: January 17, 2025, 18:37 UTC
- **Edited time:** February 12, 2026, 17:57 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonSageMakerPartnerAppsFullAccess`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AmazonSageMakerPartnerServiceCatalogProductsLambdaServiceRo

Description: Service role policy used by the AWS Lambda within the AWS ServiceCatalog provisioned products from Amazon SageMaker portfolio of products. Grants permissions to a set of related services including Secrets Manager and others.

`AmazonSageMakerPartnerServiceCatalogProductsLambdaServiceRolePolicy` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerPartnerServiceCatalogProductsLambdaServiceRolePolicy` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: August 01, 2023, 15:05 UTC
- **Edited time:** August 01, 2023, 15:05 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonSageMakerPartnerServiceCatalogProductsLambdaServiceRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
```

```
      "Action" : "secretsmanager:GetSecretValue",
      "Resource" : "arn:aws:secretsmanager:*:*:secret:*",
      "Condition" : {
        "Null" : {

AmazonSageMakerPipelinesIntegrations

Description: This Amazon Managed Policy grants permissions commonly needed for use with Callback steps and Lambda steps in SageMaker Model Building Pipelines. It is added to the AmazonSageMaker-ExecutionRole that can be created when setting up SageMaker Studio. It can also be attached to any other role that will be used for authoring or executing pipelines.

`AmazonSageMakerPipelinesIntegrations` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerPipelinesIntegrations` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: July 30, 2021, 16:35 UTC
- **Edited time:** February 17, 2023, 21:28 UTC

- **ARN**: `arn:aws:iam::aws:policy/AmazonSageMakerPipelinesIntegrations`

AmazonSageMakerQuickSightVPCPolicy

Description: This policy will be used By SageMaker Unified Studios to create VPC related resources for QuickSight

`AmazonSageMakerQuickSightVPCPolicy` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerQuickSightVPCPolicy` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: June 03, 2025, 17:37 UTC
- **Edited time:** February 12, 2026, 18:00 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonSageMakerQuickSightVPCPolicy`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "ManageQuickSightVPCConnection",
      "Effect" : "Allow",
      "Action" : [
        "quicksight:CreateVPCConnection",
        "quicksight:DescribeVPCConnection",
        "quicksight:DeleteVPCConnection",

AmazonSageMakerReadOnly

Description: Provides read only access to Amazon SageMaker via the AWS Management Console and SDK.

`AmazonSageMakerReadOnly` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerReadOnly` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: November 29, 2017, 13:07 UTC
- **Edited time:** December 01, 2021, 16:29 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonSageMakerReadOnly`

Policy version

Policy version: v11 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AmazonSageMakerServiceCatalogProductsCodeBuildServiceRolePol

Description: Service role policy used by the AWS CodeBuild within the AWS ServiceCatalog provisioned products from Amazon SageMaker portfolio of products. Grants permissions to a subset of related services including CodePipeline, CodeBuild and others.

`AmazonSageMakerServiceCatalogProductsCodeBuildServiceRolePolicy` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerServiceCatalogProductsCodeBuildServiceRolePolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: March 25, 2022, 04:27 UTC
- **Edited time:** February 12, 2026, 18:00 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonSageMakerServiceCatalogProductsCodeBuildServiceRolePolicy`

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonSageMakerServiceCatalogProductsCodePipelineServiceRole

Description: Service role policy used by the AWS CodePipeline within the AWS ServiceCatalog provisioned products from Amazon SageMaker portfolio of products. Grants permissions to a subset of related services including CodePipeline, CodeBuild and others.

`AmazonSageMakerServiceCatalogProductsCodePipelineServiceRolePolicy` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerServiceCatalogProductsCodePipelineServiceRolePolicy` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: February 22, 2022, 09:53 UTC
- **Edited time:** February 12, 2026, 18:00 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonSageMakerServiceCatalogProductsCodePipelineServiceRolePolicy`

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```

AmazonSageMakerSpacesControllerPolicy

Description: Grants Systems Manager activation, session management, and KMS key operations permissions required for the SageMaker Spaces Addon to enable secure remote access to EKS SageMaker Spaces.

`AmazonSageMakerSpacesControllerPolicy` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerSpacesControllerPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: November 19, 2025, 04:34 UTC
- **Edited time:** February 12, 2026, 18:01 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonSageMakerSpacesControllerPolicy`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonSageMakerSpacesRouterPolicy

Description: Grants Systems KMS key operations permissions required for the SageMaker Spaces Router to enable secure remote access to EKS SageMaker Spaces.

`AmazonSageMakerSpacesRouterPolicy` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerSpacesRouterPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: November 19, 2025, 04:34 UTC
- **Edited time:** February 12, 2026, 17:58 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonSageMakerSpacesRouterPolicy`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "KMSDescribeKey",
      "Effect" : "Allow",
      "Action" : [
        "kms:DescribeKey"
      ],
      "Resource" : "arn:aws:kms:*:*:key/*"
    },
    {
      "Sid" : "KMSKeyOperations",
      "Effect" : "Allow",

AmazonSageMakerTrainingPlanCreateAccess

Description: This Amazon Managed Policy provides the necessary permissions to create and manage SageMaker Training Plans. It allows users to create Training Plans and Reserved Capacities, describe existing Training Plans, and perform search and listing operations.

`AmazonSageMakerTrainingPlanCreateAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonSageMakerTrainingPlanCreateAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: December 04, 2024, 13:21 UTC
- **Edited time:** February 12, 2026, 18:03 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonSageMakerTrainingPlanCreateAccess`

Policy version

Policy version: v6 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AmazonSecurityLakeAdministrator

Description: Provides full access to Amazon Security Lake and related services needed to administer Security Lake.

`AmazonSecurityLakeAdministrator` is an AWS managed policy.

Using this policy

You can attach `AmazonSecurityLakeAdministrator` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: May 30, 2023, 22:04 UTC
- **Edited time:** February 23, 2024, 16:01 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonSecurityLakeAdministrator`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonSecurityLakeMetastoreManager

Description: Policy for Amazon SecurityLake meta store manager lambda which allows the access to cloudwatch, S3, Glue and SQS.

`AmazonSecurityLakeMetastoreManager` is an AWS managed policy.

Using this policy

You can attach `AmazonSecurityLakeMetastoreManager` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: January 23, 2024, 15:26 UTC
- **Edited time:** April 01, 2024, 20:04 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonSecurityLakeMetastoreManager`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{

AmazonSecurityLakePermissionsBoundary

Description: Amazon Security Lake creates IAM roles for third-party custom sources to write data to a data lake and for third-party subscribers to consume data from a data lake, and uses this policy when creating these roles to define the boundary of their permissions.

`AmazonSecurityLakePermissionsBoundary` is an AWS managed policy.

Using this policy

You can attach `AmazonSecurityLakePermissionsBoundary` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: November 29, 2022, 14:11 UTC
- **Edited time:** May 14, 2024, 20:39 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonSecurityLakePermissionsBoundary`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonSESFullAccess

Description: Provides full access to Amazon SES via the AWS Management Console.

`AmazonSESFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonSESFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: February 06, 2015, 18:41 UTC
- **Edited time:** February 06, 2015, 18:41 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonSESFullAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "ses:*"
      ],
      "Resource" : "*"
    }
  ]
}
```

AmazonSESReadOnlyAccess

Description: Provides read only access to Amazon SES via the AWS Management Console.

`AmazonSESReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonSESReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: February 06, 2015, 18:41 UTC
- **Edited time:** May 14, 2024, 12:03 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonSESReadOnlyAccess`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AmazonSESServiceRolePolicy

Description: Allows SES to publish Amazon CloudWatch basic monitoring metrics on behalf of your SES resources

`AmazonSESServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: May 21, 2024, 16:02 UTC
- **Edited time:** May 21, 2024, 16:02 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonSESServiceRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AmazonSNSReadOnlyAccess

Description: Provides read only access to Amazon SNS via the AWS Management Console.

`AmazonSNSReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonSNSReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: February 06, 2015, 18:41 UTC
- **Edited time:** September 24, 2024, 22:13 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonSNSReadOnlyAccess`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "SNSReadOnlyAccess",
      "Effect" : "Allow",
      "Action" : [
        "sns:GetTopicAttributes",
        "sns:List*",
        "sns:CheckIfPhoneNumberIsOptedOut",
        "sns:GetEndpointAttributes",
        "sns:GetDataProtectionPolicy",
        "sns:GetPlatformApplicationAttributes",
        "sns:GetSMSAttributes",
        "sns:GetSMSSandboxAccountStatus",
        "sns:GetSubscriptionAttributes"
      ],
      "Resource" : "*"
    },
    {
      "Sid" : "SMSAccessViaSNS",
      "Effect" : "Allow",
      "Action" : [
        "sms-voice:DescribeVerifiedDestinationNumbers",
        "sms-voice:DescribeAccountAttributes",
        "sms-voice:DescribeSpendLimits",

AmazonSNSRole

Description: Default policy for Amazon SNS service role.

`AmazonSNSRole` is an AWS managed policy.

Using this policy

You can attach `AmazonSNSRole` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: February 06, 2015, 18:41 UTC
- **Edited time:** February 06, 2015, 18:41 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/AmazonSNSRole`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "logs:CreateLogGroup",
        "logs:CreateLogStream",
        "logs:PutLogEvents",
        "logs:PutMetricFilter",
        "logs:PutRetentionPolicy"
      ],
      "Resource" : [
        "*"
      ]
    }
  ]
}
```

AmazonSQSFullAccess

Description: Provides full access to Amazon SQS via the AWS Management Console.

`AmazonSQSFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonSQSFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: February 06, 2015, 18:41 UTC
- **Edited time:** February 06, 2015, 18:41 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonSQSFullAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Action" : [
        "sqs:*"
      ],
      "Effect" : "Allow",
      "Resource" : "*"
    }
  ]
}
```

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : "ssm:DescribeEffectivePatchesForPatchBaseline",
      "Resource" : "arn:aws:ssm:*:*:patchbaseline/*"
    },
    {
```

```
      "Effect" : "Allow",
      "Action" : "ssm:GetPatchBaseline",
      "Resource" : "arn:aws:ssm:*:*:patchbaseline/*"
    },
    {
      "Effect" : "Allow",
      "Action" : "tag:GetResources",
      "Resource" : "*"
    },
    {
      "Effect" : "Allow",
      "Action" : "ssm:DescribePatchBaselines",
      "Resource" : "*"
    }
  ]
}
```

AmazonSSMReadOnlyAccess

Description: Provides read only access to Amazon SSM.

`AmazonSSMReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonSSMReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: May 29, 2015, 17:44 UTC
- **Edited time:** May 29, 2015, 17:44 UTC

- **ARN**: `arn:aws:iam::aws:policy/AmazonSSMReadOnlyAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "ssm:Describe*",
        "ssm:Get*",
        "ssm:List*"
      ],
      "Resource" : "*"
    }
  ]
}
```

AmazonSSMServiceRolePolicy

Description: Provides access to AWS Resources managed or used by Amazon SSM

`AmazonSSMServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: November 13, 2017, 19:20 UTC
- **Edited time:** July 15, 2025, 17:22 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonSSMServiceRolePolicy`

Policy version

Policy version: v16 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AmazonSumerianFullAccess

Description: Provides full access to Amazon Sumerian.

`AmazonSumerianFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonSumerianFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: April 24, 2018, 20:14 UTC
- **Edited time:** April 24, 2018, 20:14 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonSumerianFullAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
```

```
    {

AmazonTimestreamInfluxDBFullAccessWithoutMarketplaceAccess

Description: Provides administrative access to manage Amazon Timestream InfluxDB instances and parameter groups except marketplace operations.

`AmazonTimestreamInfluxDBFullAccessWithoutMarketplaceAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonTimestreamInfluxDBFullAccessWithoutMarketplaceAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: April 17, 2025, 17:52 UTC
- **Edited time:** February 12, 2026, 17:59 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonTimestreamInfluxDBFullAccessWithoutMarketplaceAccess`

Policy version

Policy version: v9 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "TimestreamInfluxDBStatement",

AmazonTimestreamInfluxDBServiceRolePolicy

Description: Provides full administrative access to create, update, delete and list Amazon Timestream InfluxDB instances and create and list parameter groups. Please refer to documentation for additional permissions needed.

`AmazonTimestreamInfluxDBServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: March 14, 2024, 18:53 UTC
- **Edited time:** March 14, 2024, 18:53 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AmazonTimestreamInfluxDBServiceRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonTimestreamReadOnlyAccess

Description: Provides read only access to Amazon Timestream. Policy also provides permission to cancel any running query. If using Customer managed CMK, please refer to documentation for additional permissions needed.

`AmazonTimestreamReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonTimestreamReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: September 30, 2020, 21:47 UTC
- **Edited time:** June 05, 2024, 19:11 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonTimestreamReadOnlyAccess`

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {

AmazonVPCFullAccess

Description: Provides full access to Amazon VPC via the AWS Management Console.

`AmazonVPCFullAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonVPCFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: February 06, 2015, 18:41 UTC
- **Edited time:** February 12, 2026, 18:00 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonVPCFullAccess`

Policy version

Policy version: v13 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonVPCNetworkAccessAnalyzerFullAccessPolicy

Description: Provides permissions to describe AWS resources, run Network Access Analyzer, and create or delete tags on Network Insights Access Scope and Network Insights Access Scope Analysis.

`AmazonVPCNetworkAccessAnalyzerFullAccessPolicy` is an AWS managed policy.

Using this policy

You can attach `AmazonVPCNetworkAccessAnalyzerFullAccessPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: June 15, 2023, 22:56 UTC
- **Edited time:** May 15, 2024, 21:40 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonVPCNetworkAccessAnalyzerFullAccessPolicy`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AmazonVPCReachabilityAnalyzerPathComponentReadPolicy

Description: This policy is attached to the role IAMRoleForReachabilityAnalyzerCrossAccountResourceAccess. This role is deployed to the member accounts in an organization when the management account enables trusted access for Reachability Analyzer. It provides permissions to view resources from across your organization using the Reachability Analyzer console.

`AmazonVPCReachabilityAnalyzerPathComponentReadPolicy` is an AWS managed policy.

Using this policy

You can attach `AmazonVPCReachabilityAnalyzerPathComponentReadPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: May 01, 2023, 20:38 UTC
- **Edited time:** May 01, 2023, 20:38 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonVPCReachabilityAnalyzerPathComponentReadPolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "NetworkFirewallPermissions",
      "Effect" : "Allow",
      "Action" : [
        "network-firewall:Describe*",
        "network-firewall:List*"
      ],
      "Resource" : "*"
    }
  ]
}
```

AmazonVPCReadOnlyAccess

Description: Provides read only access to Amazon VPC via the AWS Management Console.

`AmazonVPCReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `AmazonVPCReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: February 06, 2015, 18:41 UTC
- **Edited time:** February 12, 2026, 17:58 UTC
- **ARN**: `arn:aws:iam::aws:policy/AmazonVPCReadOnlyAccess`

Policy version

Policy version: v12 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
